Useful sections on the identification of shark teeth and fins. *An Illustrated Pocket Guide to the Sharks of the World* David A. Ebert, Sarah Fowler, Sarah L. Fowler, 2014-06-16 Sharks are probably the most misunderstood animals on the planet. We all still have a lot to learn about these fascinating creatures which are sadly more seriously threatened with extinction and in greater need of conservation and management action than any other major group of vertebrates. We have produced this guide not just because we and so many other people love sharks. It is also because their identification, whether of living animals, fishery catches or body parts sold at markets, is an essential tool to support shark conservation, fisheries management and international trade regulation, prevent further depletion of stocks and enable their recovery. The first pocket guide to all 501 shark species, all species illustrated and described, handy compact format with concise text, a six-page guide to shark teeth identification, an eight-page guide to the identification of the shark fins most commonly encountered in the fin trade. Colour plates are by Marc Dando from the hugely acclaimed *Sharks of the World: A Fully Illustrated Guide*. **Sharks and Their Relatives II** Jeffrey C. Carrier, John A. Musick, Michael R. Heithaus, 2010-03-09 Since the award-winning first volume *The Biology of Sharks and Their Relatives* published in 2004, the field has witnessed tremendous developments in research, rapid advances in technology and the emergence of new investigators beginning to explore issues of biodiversity, distribution, physiology and ecology in ways that eluded more traditional. *Sharks of the Open Ocean* Merry D. Camhi, Ellen K. Pikitch, Elizabeth A. Babcock, 2009-01-21 This important and exciting title represents the first authoritative volume focussed on pelagic open ocean sharks as a group. Virtually every pelagic shark expert in the world has contributed to this landmark publication which includes the latest data and knowledge on pelagic shark biology, fisheries management and conservation. Pelagic sharks face unprecedented levels of exploitation in all the world's oceans through both direct fisheries and bycatch, and effective management for these species is contingent upon solid science and data which this book brings together for the first time. All those involved in shark biology will need to have a copy of this book.

The Great Barrier Reef Pat Hutchings, Michael Kingsford, Ove Hoegh-Guldberg, 2019-02-01 The iconic and beautiful Great Barrier Reef Marine Park is home to one of the most diverse ecosystems in the world. With contributions from international experts, this timely and fully updated second edition of *The Great Barrier Reef* describes the animals, plants, and other organisms of the reef, as well as the biological, chemical, and physical processes that influence them. It contains new chapters on shelf slopes and fisheries and addresses pressing issues such as climate change, ocean acidification, coral bleaching, and disease, and invasive species. *The Great Barrier Reef* is a must read for the interested reef tourist, student, researcher, and environmental manager. While it has an Australian focus, it can equally be used as a reference text for most Indo-Pacific coral reefs.

Sharks: Conservation, Governance and Management Erika J. Techera, Natalie Klein, 2014-06-05 The key aim of this book is to explore the global conservation and management of sharks. There has been a rapid decline in populations of many shark species, while new science has emerged of the critical role they play in marine ecosystems. However, the authors show that conservation law and policy have been slow to develop, with only a small number of iconic species being protected worldwide. The increase in fishing impact, primarily through shark finning and bycatch, has led to shark conservation receiving greater international attention in recent years. The book explores our current knowledge and status of the law and science in relation to sharks, with a particular focus on improving frameworks for their conservation and management. Recent trends are analysed, including shark finning bans that have been put in place in several countries, the widening number of nations establishing shark sanctuaries, and the growth of shark-based tourism. The efficacy of current listing processes for endangered species and fisheries regulations is also examined. Tourism is explored as an alternative to fishing, and the risks and impacts associated with this industry are analysed. Contributors include leading authorities from universities and conservation organizations in North America, Europe, and Australia. A common theme is to emphasise the importance of collaborative governance between various interest groups and the need for interdisciplinary research and management approaches that are necessary to address the decline in sharks.
