Similarity And Choice Paperback:

Choice Frequency and Similarity Lennart Sjöberg, 1975 **Similarity and Alignment in Choice** Arthur B. Markman, Douglas L. Medin, 1995 *Similarity and Choice*, Similarity perceptions and choice Ajay Kumar Manrai, 1986
~**Ance experiment on similarity-based choice behaviour** Lucas Kramer, 2008 **Preference, Belief, and Similarity** Amos Tversky, 2003-11-21 Amos Tversky 1937 1996 a towering figure in cognitive and mathematical psychology devoted his professional life to the study of similarity judgment and decision making He had a unique ability to master the technicalities of normative ideals and then to intuit and demonstrate experimentally their systematic violation due to the vagaries and consequences of human information processing He created new areas of study and helped transform disciplines as varied as economics law medicine political science philosophy and statistics This book collects forty of Tversky's articles selected by him in collaboration with the editor during the last months of Tversky's life It is divided into three sections Similarity Judgment and Preferences The Preferences section is subdivided into Probabilistic Models of Choice Choice under Risk and Uncertainty and Contingent Preferences Included are several articles written with his frequent collaborator Nobel Prize winning economist Daniel Kahneman **The Similarity Effect** Thomas J. Steenburgh, 2014 This paper highlights a logical contradiction in the currently accepted theory of choice This contradiction occurs when a decision is reframed by adding a clone to the choice set The current theory concludes that individuals have context dependent preferences if they make consistent choices it concludes that individuals have rational preferences if they systematically switch from one alternative to another I argue that these are not the logical conclusions to draw from the data and that the currently accepted theory should be revised Rational decision making assumes that individuals make consistent decisions and leads to the similarity effect Luce's IIA implies that adding a clone to the choice set makes an alternative more preferable which is a framing effect
Biographical Similarity and Interpersonal Choice James L. Bowditch, 1969 **Optimal Similarity Judgments in Intertemporal Choice (and Beyond)** Fabrizio Adriani, Silvia Sonderegger, 2019 We use a simple cost benefit analysis to derive optimal similarity judgments addressing the question when should we expect a decision maker to distinguish between different time periods or different prizes Our key premise is that cognitive resources are costly and are to be deployed only where they really matter We show that this simple insight can explain a number of observed anomalies such as i time preference reversal ii magnitude effects iii interval length effects For each of these phenomena our approach allows to identify the direction of the bias relative to the benchmark case where cognitive resources are costless Finally we show that when applied to choice under risk the same insights predict anomalies such as the ratio and certainty effects and rationalize Rabin's risk aversion paradox This suggests that the theory may provide a parsimonious explanation of behavioral anomalies in different contexts **Similarity and Choice** Ernst-Dieter Lantermann, Hubert Feger, Clyde Hamilton Coombs, 1980

Rational Choice in an Uncertain World Reid Hastie,Robyn M.

Dawes,2009-11-17 The authors are highly respected as leading figures in the field of judgment and decision making There are many existing books on topics related to judgment and decision making but this book makes a unique contribution to this field because of its systematic and scholarly approach and its breadth of coverage Robert Goldstone Indiana University Reid Hastie and Robyn Dawes are two of the most eminent researchers in the field I know these authors to be excellent writers and I have no doubt that their writing style will be suitable for my students William Goldstein University of Chicago In the new edition of this award winning text renowned authors Reid Hastie and Robyn Dawes compare and contrast the basic principles of rationality with actual behavior in making decisions This book explores theories and research findings from the field of judgment and decision making in a non technical manner using anecdotes as a teaching device Intended as an introductory textbook for advanced undergraduate and graduate students the material not only is of scholarly interest but is practical as well New to This Edition Chapter introductions conclusions and cross references between chapters make the text more student friendly An abundance of examples from areas such as finance medicine law and engineering anchor concepts to the real world Increased consideration of descriptive psychological models of decision making augment the original emphasis on normative rational Expected Utility Theory models bring the book up to date Balance among the three major approaches to judgment and decision making cognitive psychological analyses of mental processes and heuristics descriptive algebraic models of judgment and decision processes and rational models of decision making

Stochastic Choice and Attention Capacities Victor Aguiar,2015 This paper shows that frequently observed violations of IIA Independence of Irrelevant Alternatives namely the similarity and attraction effect can be compatible with the maximization of rational preferences and the violations themselves can be used to infer the underlying rational preference relation In order to do this I introduce a new choice rule that is based on the evidence that decision makers do not pay attention to all items in a menu Nevertheless they have an underlying rational preference The Fuzzy Attention Model FAM is characterized by an axiom based on revealed stochastic choice akin to the Strong Axiom of Revealed Preference SARP The model explains both effects by introducing the idea of an attention capacity that allows for complementarity and substitutability in attention The similarity effect is related to substitutability while the attraction effect has to do with complementarity The FAM nests the literature on random consideration sets proposed by Manzini and Mariotti 2014 and the standard rational model but is not nested in the random utility framework

Fuzzy Choice Functions Irina

Georgescu,2007-07-16 A main topic in welfare economics is the rational behaviour of a consumer when faced with various prices and incomes he has to make a choice The theory of consumption establishes the framework in which the rationality of

consumers is defined and the principle on which it is based By 109 the rationality of a consumer may be described by postulating that a consumer has a definite preference over all conceivable commodity bundles and that he chooses those commodity bundles that are optimal with respect to his preference subject to budgetary constraints Samuelson's theory of revealed preference expresses the rationality of a consumer in terms of some preference relation associated with a demand function The foundation of this theory is built on The Weak Axiom of Consumer Behavior 87 and on The Strong Axiom of Consumer Behavior 63 The second axiom assures that the demand function can be reconstructed from a revealed preference relation To make a rational choice is a more general problem that goes beyond the theme of consumer In economics social life medicine psychology etc there are several cases when an agent has to make rational decisions For instance when the members of a society vote different candidates in an election a plausible hypothesis is that having a desideratum each of them is rational in the act of choice

Self-regulated Category Learning Xinyun Tang, 2016 Prior research has found that when given the opportunity to select what category to view for each trial subjects tend to select the same category repeatedly blocked presentation Tauber et al 2012 even though interleaved presentation examples from the same category are never presented consecutively has been shown to benefit category learning Kang Pashler 2012 We investigated whether subjects' study choices were sensitive to category similarity and whether such choices predicted learning outcomes In the first experiment category similarity high vs low was manipulated between subjects and subjects selected the category they want to view for each study trial Subjects studied 48 exemplars each from 4 categories and after a short distractor they were given a classification test that included 16 exemplars half studied novel from each category Compared to low similarity group subjects in high similarity group made more switches change in category selection from one trial to another and had fewer blocks the number of times of selecting same category for more than 3 trials during study The number of blocks was positively correlated with performance in the low similarity group while the average length of blocks was negatively correlated with performance in the high similarity group Our study provides further evidence for the moderating role of category similarity in interleaving effect Calvalho Goldstone 2014 and indicates that subjects are sensitive to category similarity when given the choice to select In the second experiment we measured within category similarity of 16 painters' paintings using cluster analysis which can be used in future replication studies and also provided a new possibility for category learning research that concerns category similarity
