Science and Technology Dimitris N. Chorafas, 2014-09-12 The aim of this book is to explore science and technology from the viewpoint of creating new knowledge as opposed to the reinterpretation of existing knowledge in ever greater but uncertain detail Scientists and technologists make progress by distinguishing between what they regard as meaningful and what they consider as secondary or unimportant The meaningful is dynamic typically the less important is static Science and technology have made a major contribution to the culture and to the standard of living of our society From antiquity to the present day the most distinguished scientists and technologists have been thinkers experimenters and persons willing and able to challenge the obvious Technology develops products and processes based on the breakthroughs of science If technologists fail to steadily upgrade their skills tools and methods they will only be as good as their last design risking obsolescence Using practical examples and case studies this book documents the correlations existing between science and technology and elucidates these correlations with practical applications ranging from real life situations from R D to energy production As it is a salient problem and a most challenging one to our society power production has been chosen as a major case study The holistic approach to science and technology followed by this text enhances the ability to deliver practical results This book is intended for students and researchers of science technology and mathematical analysis while also providing a valuable reference book for professionals Its subject is one of the most debated problems of mankind
