Simple Fields Of Physics By Finite Element Analysis Paperback:

Simple Fields of Physics by Finite Element Analysis B. Backstrom, 2005 Have you ever solved a partial differential equation The laws of physics may be transformed mathematically into second order partial differential equations PDEs The simplest one of this type is known as the Laplace equation This governs the distribution of gravitation in free space Other PDEs for the electric and magnetic fields etc are somewhat similar but more complicated Few of these equations have exact solutions which explains why they do not receive the attention they deserve in the academic curriculum Only in recent years has it become possible to solve PDEs numerically on an ordinary PC by finite element analysis FEA The present book is unique in its approach It is not another volume on conceivable algorithms of FEA Its main purpose is to exploit a free web program for dealing with PDEs occurring in physics This program solves a typical example in seconds and promptly presents the results graphically by a variety of plots The main topics treated are the following Plotting Functions Laplace and Poisson PDEs Electricity Magnetism Heat Problems in 3D Space Electromagnetic Waves Wave Mechanics Fluid Dynamics More information is available on the author's web site *Simple Fields of Physics by Fea* Gunnar Backstrom, 2012-11 The laws of physics may be transformed mathematically into second order partial differential equations PDEs The simplest one of this type is known as the Laplace equation This governs the distribution of gravitation in free space Other PDEs for the electric and magnetic fields etc are somewhat similar but more complicated Few of these equations have exact solutions which explains why they do not receive the attention they deserve in the academic curriculum Only in recent years has it become possible to solve PDEs numerically on an ordinary PC by finite element analysis FEA The present book is unique in its approach It is not another volume on conceivable algorithms of FEA Its main purpose is to exploit a free web program for dealing with PDEs occurring in physics This program solves a typical example in seconds and promptly presents the results graphically by a variety of plots *The Modes of Gaseous Combustion* Nickolai M. Rubtsov, 2015-11-25 This book provides an analysis of contemporary problems in combustion science namely flame propagation detonation and heterophaseous combustion based on the works of the author The current problems in the area of gas combustion as well as the methods allowing to calculate and estimate limiting conditions of ignition and flame propagation on the basis of experimental results are considered The book focuses on the virtually inaccessible works of Russian authors and will be useful for experienced students and qualified scientists in the area of experimental studies of combustion processes *Finite Element Analysis with Personal Computers* Edward R. Champion, 2020-11-25 This book addresses the history of finite element analysis FEA and why FEA is becoming a necessary tool for the solution of a wide variety of problems encountered in the professional engineer's career It helps the user to solve general classes of problems with FEA on personal computers **Spatial Features of Ignition and Combustion** Nickolai M. Rubtsov, Kirill Ya. Troshin, Alexander P. Kalinin, Michail I. Alymov, 2025-05-17 The book contains new experimental and theoretical results on combustion with practical applications and includes fire safety

issues both in combustion control and in the use of noble metals in catalytically stabilized CS deuterium combustion namely determination of catalytic ignition limits in noble metal hydrogen deuterium carbon monoxide methane gas systems The book presents new interpretations of the features of spatial ignition and flame propagation over surfaces of different chemical nature and morphology and subsonic combustion in reactive flows and in volumes of complex geometry The book considers the modern problems of multisensory data analysis and the possibilities of hyperspectral cinematography in the wide range of wavelengths from ultraviolet to infrared visualization of fast combustion processes of flame propagation and flame acceleration The book is useful for students of advanced courses and scientists dealing with problems of optical spectroscopy visualization digital image recognition and gaseous combustion
