the greatest ancient authority on Aristotle's Physics whose works have survived to the present lived in the sixth century A.D. He produced detailed commentaries on several of Aristotle's works. Those on the Physics which alone come to over 1300 pages in the original Greek preserve not only a centuries-old tradition of ancient scholarship on Aristotle but also fragments of lost works by other thinkers including both the Presocratic philosophers and such Aristotelians as Eudemus, Theophrastus, and Alexander. The Physics contains some of Aristotle's best and most enduring work, and Simplicius' commentaries are essential to an understanding of it. This volume makes the commentary on Book Six accessible at last to all scholars, whether or not they know classical Greek. It will be indispensable for students of classical philosophy and especially of Aristotle, as well as for those interested in philosophical thought of late antiquity. It will also be welcomed by students of the history of ideas and philosophers interested in problems of mathematics and motion. Bloomsbury Publishing

With this translation, all 12 volumes of translation of Simplicius' commentary on Aristotle's Physics have been published. Full list below:

In Physics 1.1-2, Aristotle raises the question of the number and character of the first principles of nature and feels the need to oppose the challenge of the paradoxical Eleatic philosophers who had denied that there could be more than one unchanging thing. This volume, part of the groundbreaking Ancient Commentators on Aristotle series, translates into English for the first time Simplicius' commentary on this selected text and includes a brief introduction, extensive explanatory notes, indexes, and a bibliography.

The Philosophy of the Commentators, 200-600 AD: Psychology (with ethics and religion), Richard Sorabji, 2005

This is the first work to draw on the four hundred years of transition from ancient Greek philosophy to the medieval philosophy of Islam and the West. During this period, philosophy was often written in the form of commentaries on the works of Plato and Aristotle. Many ideas wrongly credited to the Middle Ages derive from these centuries, such as that of impetus in dynamics and intentional objects in philosophy of mind. The later Neoplatonist commentators fought a losing battle with Christianity but inadvertently made Aristotle acceptable to Christians by ascribing to him belief in a Creator God and human immortality. The commentators provide a panorama of up to a thousand years of Greek philosophy, much of which would otherwise be lost. They also serve as the missing link essential for understanding the subsequent history of Western philosophy. Volume 1 deals with psychology, which for the Neoplatonist commentators was the

gateway to metaphysics and theology It was the subject on which Plato and Aristotle disagreed most and on which the commentators went furthest beyond them in their search for synthesis Ethics and religious practice fall naturally under psychology and are included in this volume All sources appear in English translation and are carefully linked and cross referenced by editorial comment and explanation Bibliographies are provided throughout *The Philosophy of the Commentators, 200-600 AD: Physics* Richard Sorabji, 2005 Physics in Neoplatonist thought the subject which occupies the second volume of this sourcebook was innovative the world of space and time was causally ordered by a nonspatial nontemporal world and this view required original thinking Theophrastus of Eresus, Commentary Volume 3.1: Sources on Physics (Texts 137-223) Robert Sharples, 2016-06-21 This volume forms part of the large international Theophrastus project started by Brill in 1992 and edited by W W Fortenbaugh R W Sharples and D Gutas Together with volumes comprising the texts and translations the commentary volumes provide a new generation of classicists with an up to date collection of the fragments and testimonia relating to Theophrastus c 370 288 5 B C Aristotle's pupil and successor as head of the Lyceum In the present volume the focus is on natural philosophy apart from the study of living things Topics covered include the principles of scientific enquiry place time motion the heavens the sublunary world meteorology and the study of materials

Space from Zeno to Einstein Nick Huggett, 1999-04-01 Learning through original texts can be a powerful heuristic tool This book collects a dozen classic readings that are generally accepted as the most significant contributions to the philosophy of space The readings have been selected both on the basis of their relevance to recent debates on the nature of space and on the extent to which they carry premonitions of contemporary physics In his detailed commentaries Nick Huggett weaves together the readings and links them to our modern understanding of the subject Together the readings indicate the general historical development of the concept of space and in his commentaries Huggett explains their logical relations He also uses our contemporary understanding of space to help clarify the key ideas of the texts One goal is to prepare the reader both scientist and nonscientist to learn and understand relativity theory the basis of our current understanding of space The readings are by Zeno Plato Aristotle Euclid Descartes Newton Leibniz Clarke Berkeley Kant Mach Poincaré and Einstein **A**

Vocabulary of the Ancient Commentators on Aristotle Richard D. McKirahan, 2021-12-16 An astounding project of analysis on more than one hundred translations of ancient philosophical texts this index of words found in the Ancient Commentators on Aristotle series comprises some 114 000 entries It forms in effect a unique dictionary of philosophical terms from the post Hellenistic period through to late antiquity and will be an essential reference tool for any scholar working on the meaning of these ancient texts As traditional dictionaries have usually neglected to include translation examples from philosophical texts of this period scholars interested in how meanings of words vary across time and author have been ill served This index fills a huge gap therefore in the lexical analysis of ancient Greek and has application well beyond the reading of ancient philosophical commentaries Bringing together the full indexes from 110 of the volumes

published in Bloomsbury's Ancient Commentators on Aristotle series McKirahan has combined each word entry and analysed how many times particular translations occur He presents his findings numerically so that each meaning in turn has a note as to the number of times it is used For meanings that are found between one and four times the volume details are also given so that readers may quickly and easily look up the texts themselves
