Applications of Systems Approaches at the Field Level M.J. Kropff,Paul Teng,P.K. Aggarwal,Johan Bouma,B.A.M Bouman,John W. Jones,H.H. Van Laar,1997-01-31 Systems approaches for agricultural development are needed to determine rational strategies for the role of agriculture in national development Mathematical models and computer simulation provide objective tools for applying science to determine and evaluate options for resource management at field farm and regional scales However these tools would not be fully utilizable without incorporating social and economic dimensions into their application The second international symposium Systems Approaches for Agricultural Development SAAD held in Los Ba os 6 8 December 1995 fostered this link between the

biophysical sciences and the social sciences in the selection of keynote papers and oral presentations a selection of which are included in these books The contents further reflect how systems approaches have definitely moved beyond the research mode into the application mode The large number and high quality of interdisciplinary research projects reported from different parts of the globe to determine land use options that will meet multiple goals and yet sustain natural resource bases is a key indicator of this coming of age At the farm level where trade off decisions between processes and products commodities feature strongly much progress is also evident in the development of systems based tools for decision making At the field level optimization of resource use and minimizing environmental effects has become of major concern for which systems approaches are indispensable The books of which Volume I deals with regional and farm studies level and Volume II with field level studies will be of particular interest to all agricultural scientists and planners as well as students interested in multidisciplinary and holistic approaches to agricultural development Water Saving Techniques for Plant Growth H. Verplancke, E.B.A. de Strooper, M.F. de Boodt, 2012-12-06 Large areas of crops are now grown under water stressed conditions on non irrigated and under limited irrigation in semi arid and arid regions In the future this area of water stressed crops will increase as a result of increasing competition from other water users declining ground water levels and the bringing into production of fragile lands that have low water holding capacity such as sandy desert soils Consequently strategies and practices to increase total yields and efficient water use must be improved After the introductory material and keynotes the book is divided into four parts Part I covers soil water management Part II deals with model approaches to evaluate the soil water atmosphere interactions Part III treats water saving techniques through soil conditioning and Part IV discusses case studies of water management systems Water Saving Techniques for Plant Growth thus represents a general account of interest and activities of the various scientific disciplines which are concerned in desert encroachment as part of global change
