macroeconomics were proven useless because they mistook the beauty of theoretical models for truth. Thus questions have arisen about using new theoretical and empirical structures that would better describe our economic systems. Bridging Microeconomics and Macroeconomics and the Effects on Economic Development and Growth is an essential reference source that analyzes the hypotheses that govern the relationships of aggregate structures, macroeconomic analysis that may be compatible with the assumptions that govern the behavior of individuals, households and firms, micro analysis and vice versa in trying to achieve sustainable economic development and growth. Moreover, modern evolutionary growth thinking is used in trying to bridge the inconsistencies between microeconomics and macroeconomics and confront their failures in order to better describe the economic reality. While highlighting a broad range of topics including globalization, economic systems and the role of institutions, this book is aimed toward economic analysts, financial advisors, policymakers, researchers, academicians and students.

Rational Expectations Michael Malakellis,2012-12-06 This monograph is concerned with the formulation and implementation of ORANI INT an intertemporal Computable General Equilibrium CGE model of the Australian economy The aim is to bring together in a balanced approach theory and data for the purpose of developing a practical state of the art tool for policy analysis The modelling approach adopted is motivated by the recent trend in economy wide modelling to combine the respective strengths of traditional CGE models and modern macroeconomic models Traditional CGE models typically provide a disaggregate representation of the economy at a single point in time Such models are useful for analysing issues involving the allocation of resources among the various agents identified at a particular point in time Modern macroeconomic models on the other hand usually provide an aggregate representation of the economy over many points in time Such models

are useful for analysing issues involving the allocation of resources across time A model that combines the strengths of static CGE models and modern macro dynamic models is amenable to addressing a wide range of policy issues To demonstrate this point ORANI INT is used to analyse tariff reform
