**Macroeconomics of an Open Economy** Franz Gehrels, 2012-12-06 The large aggregates in the economy consumption investment production of the domestic and the international sectors international capital flows financial accumulation and indebtedness are analysed in this book as problems in time optimisation for enterprises and households The effects of fiscal and monetary policies along with exchange rate variation are examined and their simultaneous use for stabilizing demand are found to be necessary All household decisions on consumptions savings and financial disposition are conditioned by uncertainty and similarly for firms who make more complex simultaneous decisions on production real investment financing and market strategy The marginal efficiency of investment function derived from these decisions is fundamentally different from the marginal productivity of capital in the neoclassical sense An economy which grows through the accumulation of capital increase in labor supply and technological progress is the framework in which all of these variables move This codetermines the allocation of factors between domestic and international production and the development of foreign trade The growth both of the public debt and of international investment are treated in depth

*Optimal Dynamic Investment Policies of a Value Maximizing Firm* Peter M. Kort, 2012-12-06 1 1 Scope of the Book This book is a contribution to the area of dynamic models of the firm. The motivation for this kind of research is the following: Empirical studies e.g. Albach 1976 have shown that the development of the firm over time can be divided into different stages such as growth, stationarity and contraction. In order to understand and evaluate these stages in a proper way it is important to develop a suitable theoretical framework. To that end economists have applied dynamic mathematical techniques such as optimal control theory, calculus of variations and dynamic programming to design and analyse dynamic models of the firm. In this way the economic theory of the firm is extended to a dynamic context. Within the field of the dynamics of the firm this book develops a general investment decision rule based on the concept net present value of marginal investment which is applicable in deterministic dynamic models of the firm. Studies the influence of adjustment costs of investment on optimal dynamic firm behavior. Extends the stochastic dynamic theory of the firm by connecting it with a dynamic version of the Capital Asset Pricing Model. Before elaborating on the dynamics of the firm we first review the subject of net present value in the classical analysis.

**Macroeconomic Policy** Martin Weale, Andrew Blake, Nicos Christodoulakis, James Meade, David Vines, 2015-10-05 This analysis of macroeconomic policy originally published in 1989

argues that key government objectives such as reduced inflation decreased unemployment and an adequate level of national saving can be achieved only by employing both monetary and fiscal policies in conjunction with supply side policies expressly designed to improve the workings of the labour market Part 1 is a comparative analysis showing the effects of monetary and fiscal policy on the economy Real wage rigidity in the labour market is shown to have important consequences for the working of both types of policy because it conditions the economy's response to tax changes Part 2 presents an econometric model which combines consistent stock flow accounts with a full range of expectational effects Part 3 presents an innovative technique for solving rational expectations models with the need for arbitrary terminal conditions
