**Macrophages and Related Cells** Michael A. Horton, 2013-06-29 To produce a comprehensive overview of macrophages and related cell types in a short review volume is an impossible task When I selected the topics to be included some equally important areas were omitted by necessity and for this I apologize My choices have been somewhat eclectic touching subjects of personal interest such as osteoclast biology and macrophage electrophysiology or of current fashion apoptosis antigen processing cell adhesion molecules The book has also had to encompass areas of a more general flavor to provide balance for the general reader such as reviews of macrophage development heterogeneity and function and of the surface molecules expressed by macrophages I thank all the authors for their prompt submissions all have been of high quality and my editorial tasks thankfully have been minimal Michael A Horton London United Kingdom ix Contents Chapter J An Overview of Receptors of MPS Cells Iain Fraser and Siamon Gordon 1 Introduction 1 2 The Mononuclear Phagocyte System 2 3 Diversity of Macrophage Plasma Membrane Receptors 6 3 1 A Structural Approach to Classification 6 8 3 2 Multisubunit Receptors 3 3 Soluble Receptors 9 3 4 Lectins and Lectin Like Receptors 12 4 Functions and Selected Examples 14 4 1 Growth Differentiation and Modulation 14 4 2 Cell Cell and Cell Matrix Interactions 16 4 3 Endocytosis and Scavenger Receptors 16 4 4 Secretory Responses and Biosynthesis of Effector Molecules 17 5 Concluding Remarks 17 6 References 18

Goldberger,2013-11-11 The motivation for us to conceive this work on regulation was mainly our belief that it would be fun and at the same time productive to approach the subject in a way that differs from that of other treatises We thought it might be interesting and instructive for both author and reader to examine a particular area of investigation in a framework of many different problems Cutting across the traditional boundaries that have separated the subjects in past volumes on regulation is not an easy thing to do not because it is difficult to think of what interesting topics should replace the old ones but because it is difficult to find authors who are willing to write about areas outside those pursued in their own laboratories Anyone who takes on the task of reviewing a broad area of interest must weave together its various parts by picking up the threads from many different laboratories and attempt to produce a fabric with a meaningful design Finding persons who are likely to succeed in such tasks was the most difficult part of our job In the first volume of this treatise most of the chapters dealt with the mechanisms of regulation of gene expression in microorganisms This second volume involves a somewhat broader area spanning the prokaryotic eukaryotic border **Immunology** Joseph Bellanti,2013-11-11 This comprehensive treatise on the reticuloendothelial system is a project jointly shared by individual members of the Reticuloendothelial RE Society and bio medical scientists in general who are interested in the intricate system of ceHs and molecular moieties derived from those ceHs which constitute the RES It may now be more fashionable in some quarters to consider these ceHs as part of what is called the mononuclear phagocytic system or the lymphoreticular system Nevertheless because of historical developments and current interest in the subject by investigators from many diverse areas it seems advantageous to present in one comprehensive treatise current information and knowledge concerning basic aspects of the RES such as morphology biochemistry phylogeny and ontogeny physiology and pharmacology as well as clinical areas including immunopathology cancer infectious diseases allergy and hypersensitivity It is anticipated that by presenting information

concerning these apparently heterogeneous topics under the unifying umbrella of the RES attention will be focused on the similarities as well as interactions among the cell types constituting the RES from the viewpoint of various disciplines. The treatise editors and their editorial board consisting predominantly of the editors of individual volumes are extremely grateful for the enthusiastic cooperation and enormous task undertaken by members of the biomedical community in general and especially by members of the American as well as European and Japanese Reticuloendothelial Societies. Artificial intelligence in predicting, determining and controlling cell phenotype or tissue function in inflammatory diseases Melanie L. Hart, Bernd Roluffs, Ryuji Kato, 2024-05-10 The last decade has seen rapid development in the use of computational techniques at bulk tissue and single cell level. However, our knowledge remains limited in this regard and further progress is needed, especially in inflammatory and degenerative diseases. Controlling modeling or predicting cellular phenotype in this context using artificial intelligence (AI) will greatly improve the available in vitro, in situ, in vivo and in silico methods but also aid in the understanding of disease pathology and therapeutic efficiency. These methods not only have ramifications for our pathophysiological understanding of tissue function but are also important for advancing AI methods in cell culture, tissue explants or in vivo for immunologically relevant characteristics of single cells, cell populations and tissues to predict cell or tissue function.
