Managed Grasslands Regional Studies Ecosystems Of The World 17a:

Grasses and Grassland Ecology David J. Gibson, 2009 This book is the most up to date and thorough account of the natural history of the plants that comprise the most important food crop on Earth the grasses and grasslands **The Lowland Grasslands of Central and Eastern Europe** IUCN East European Programme, 1991 **Global Vegetation** Jörg S. Pfadenhauer, Frank A. Klötzli, 2020-09-09 This up to date textbook of global vegetation ecology which comprises the current state of knowledge is long overdue and much needed It is a translation of the textbook *Vegetation der Erde* Springer Spektrum Heidelberg A short introductory chapter deals with the fundamentals of vegetation ecology that are of importance for the delimitation and characterization of the global vegetation presented in this book chorology evolution of plants physiognomic and structural characteristics phytodiversity and the human impact on it as well as general terminology concerning both plant growth forms and on vegetation structure types In the following chapters the zonal and azonal vegetation from the tropics to the polar regions including high mountains is described and discussed The main focus is on the characterization of interactions between the spatial location of plants and plant communities on the one hand and site conditions historic and genetic processes spatial and temporal patterns ecophysiology and anthropogenic influences on the other hand Additional information on specific topics is provided in 51 boxes **Perspectives for Biodiversity and Ecosystems** Carsten Hobohm, 2021-02-05 The novelty of the book is a strong focus on perception perspectives and prediction by scientists with profound insight into the ecology of ecosystems or into human demands and activity The challenge is to bridge from empirical data and the knowledge of the past to the possibilities of the performance in the future We assume that there is scope for more cooperation between the fields of ecology and practical philosophy or other social sciences in organising ecosystems and shaping the cultural future of humankind and that such collaboration should be accorded considerably more priority This book deals with environmental processes seen within a framework of the nature of ecosystems and human cultures The future of the environment the development of ecosystems and effective nature conservation management are the essentials of this book Human nature and culture and in particular their interactions are interpreted as a set of rules and as given The aim is not only to assess the significance of human influence on species composition and biodiversity but also to weigh up the subsequent potentials for action In this book we will analyze the problems independently of one another even if they are interconnected This book focuses on perspectives and prognoses for the impacts of anthropogenic activity on ecosystems and thus on species conservation Its goal is to improve assessments of the impacts of human activity on the environment We are aware that prognoses have very often proven to be false It is difficult to impossible to be able to predict with precision how evolution and ecosystems will change in future under anthropogenic influence This strengthens our resolve to attempt to retain the highest possible degree of scientific integrity and professionalism and not to shy away from expressing the uncertainty of our own ideas and prognoses We venture prognoses in this book and we will fail However we

hope that we will be wrong on the right side Ecology and Evolutionary Biology of Clonal Plants Josef F. Stuefer, Brigitta Erschbamer, Heidrun Huber, Jun-Ichirou Suzuki, 2013-06-29 Spontaneous self cloning or clonality is a widespread phenomenon in the plant kingdom and has a wide array of ecological and evolutionary implications This volume is the outcome of an international workshop on clonal plant biology aimed at illustrating current progress and recent developments in the scientific study of clonality in plants The first section of this book includes a collection of original research articles which demonstrate the wide variety of approaches and scientific challenges linked to clonality in plants The topics covered in this section include ecological and evolutionary implications of sexual versus asexual propagation including life history evolution and sex ratio dynamics the importance of internal resource transport and remobilization of storage products for the invasiveness and competitiveness of clonal plants a survey of clonal growth forms in grassland communities and studies on the interactions between clonal plants and animals and fungi The approaches used range from experimental studies on a broad variety of systems to mathematical modeling of clonal growth and its consequences The second part features discussion and review papers on a diverse array of subjects ranging from developmental considerations of clonality principles of selection and evolution in clonal plants a survey of clonality in algae to potential implications of clonality for plant mating and beyond This part of the volume aims at presenting novel ideas and hypotheses and at summarizing existing knowledge in previously under researched areas thereby providing directions for future research initiatives This book captures ongoing cutting edge research in the field of clonal plant ecology and evolution It is directed to anyone from the undergraduate to specialist level who is interested in the biology of the intriguing phenomenon of asexual propagation in plants Progress in Botany Karl Esser, 2012-12-06 With one new volume each year this series keeps scientists and advanced students informed of the latest developments and results in all areas of botany The present volume includes reviews on structural botany plant taxonomy physiology genetics and geobotany Australia's Most Threatened Ecosystem James Barrie Kirkpatrick, Keith L. McDougall, Michael Hyde, 1995 Adapted for the general reader from Conservation of Lowland Native Grasslands in Southeastern Australia Discusses the ecology of lowland grassland describes the flora of grassland communities and presents ideas and strategies for conserving these communities Also provides a brief history of the lowland grasslands Includes colour photographs and drawings of many grassland plants suggestions for further reading and an index Tropical Grasslands, 1991 *Mediterranean Geoecosystems* Gerardus Johannus Jacobus Bergkamp, 1996 *Ecosystems of the World* David W.
