The Poison Trials Alisha Rankin, 2021-01-22 In 1524 Pope Clement VII gave two condemned criminals to his physician to test a promising new antidote After each convict ate a marzipan cake poisoned with deadly aconite one of them received the antidote and lived the other died in agony In sixteenth century Europe this and more than a dozen other accounts of poison trials were committed to writing Alisha Rankin tells their little known story At a time when poison was widely feared the urgent need for effective cures provoked intense excitement about new drugs As doctors created performed and evaluated poison trials they devoted careful attention to method wrote detailed experimental reports and engaged with the problem of using human subjects for fatal tests In reconstructing this history Rankin reveals how the antidote trials generated extensive engagement with experimental thinking long before the great experimental boom of the seventeenth century and investigates how competition with lower class healers spurred on this trend The Poison Trials sheds welcome and timely light on the intertwined nature of medical innovations professional rivalries and political power

Introduction to Toxicology John Timbrell, 2019-10-30 Since the publication of the first edition of *Introduction to Toxicology* toxicology has become a more mature science the number of undergraduate and postgraduate courses has increased and thus the need for a regularly updated introductory text has become more pressing This third edition caters for this need in a clear and easy to read style featuring Up to the minute information Relevant toxicological examples that reinforce principles End of chapter essay questions New and redrawn illustrations Glossary of terms Extensively revised bibliography The fundamental principles of absorption distribution metabolism and excretion are described in the introductory chapters as are the types of exposure and response In subsequent chapters these are clarified with the use of carefully chosen examples Among the topics considered are the potential adverse effects of drugs pesticides
