Polar Magnetospheric Substorms:

Physics of Magnetospheric Substorms Syun-Ichi Akasofu, 2012-12-06 Man through intensive observations of natural phenomena has learned about some of the basic principles which govern nature The aurora is one of the most fascinating of these natural phenomena and by studying it man has just begun to comprehend auroral phenomena in terms of basic cosmic electrodynamic processes The systematic and extensive observation of the aurora during and after the great international enterprise the International Geophysical Year IGY led to the concept of the auroral substorm Like many other geophysical phenomena auroral displays have a dual time universal and local time dependence when seen by a ground based observer Thus it was a difficult task for single observers rotating with the Earth once a day to grasp a transient feature of a large scale auroral display Such a complexity is inevitable in studying many geophysical features in particular the polar upper atmospheric phenomena However it was found that their complexity began to unfold when the concept of the auroral substorm was introduced In a book entitled **Polar and Magnetospheric Substorms** the predecessor to this book I tried to describe the auroral phenomena as completely as possible in terms of the concept of the auroral substorm At that time the first satellite observations of particles and magnetic fields during substorms were just becoming available and it was suggested that the auroral sub storm is a manifestation of a magnetospheric phenomenon called the magnetospheric substorm

Polar and Magnetospheric Substorms Syun-Ichi Akasofu, 2012-12-06 It has become increasingly clear that the magnetosphere becomes intermittently unstable and explosively releases a large amount of energy into the polar upper atmosphere This particular magnetospheric phenomenon is called the magnetospheric sub storm It is manifested as an activity or disturbance of various polar upper atmospheric phenomena such as intense auroral displays and X ray bursts Highly active conditions in the polar upper atmosphere result from a successive occurrence of such an elementary activity the polar substorm which lasts typically of order one to three hours The concept of the magnetospheric substorm and its manifestation in the polar upper atmosphere the polar substorm has rapidly crystallized during the last few years We can find a hint of such a concept in the term polar elementary storm introduced by Kristian Birkeland as early as 1908 However we are greatly indebted to Sydney Chapman who established the basic foundation of magnetospheric physics and has led researches in this field during the last half century Indeed the terms polar magnetic substorm and auroral substorm were first suggested by Sydney Chapman The concept of the substorm was then soon extended by Neil M Brice of Cornell University and Kinsey A Anderson and his colleagues at the University of California Berkeley who introduced the term magnetospheric substorm We owe many of these recent developments in magnetospheric physics to the great international enterprise the International Geophysical Year IGY and subsequent international cooperative effort IGC IQSY *Physics of Magnetospheric Substorms* Syun-Ichi Akasofu, 1977-02-28 **Dynamics of the Magnetosphere** Syun-Ichi

Akasofu, 2012-12-06 The Los Alamos Chapman Conference on Magnetospheric Substorms and Related Plasma Processes can

be considered the fourth in a series devoted to magnetospheric substorms after the Moscow 1971 Houston 1972 and Bryce Mountain 1974 meetings The main motivation for organizing the Los Alamos Conference was that magnetospheric substorm studies have advanced enough to the point of bringing experimenters analysts and theorists together to discuss major substorm problems with special emphasis on theoretical interpretations in terms of plasma processes In spite of an extremely heavy schedule from 8 30 A M to 10 00 P M every session was conducted in an enjoyable and spirited atmosphere In fact during one of the afternoons that we had put aside for relaxation John Winckler led a group of the attendees in a climb to the ceremonial cave of a prehistoric Indian ruin at Bandelier National Monument near Los Alamos under a crystal blue sky and a bright New Mexico sun There they danced as the former dwellers of the pueblo had perhaps as an impromptu evocation of a magnetospheric event

Magnetospheric Plasma Sources and Losses Bengt Hultqvist, Marit Øieroset, Götz Paschmann, Rudolf Treumann, 2012-12-06 The present sixth volume of ISSI Space Sciences Series is the outcome of the most ambitious study project of ISSI hitherto that on Source and Loss Processes of Magnetospheric Plasma The goal has been to produce a fully integrated book on the subject which gives an authoritative overview of all aspects of the topic in a well organized form useful and readable both for active researchers in the field and for young scientists who are starting their research in space physics In order to represent the full diversity of experience and perspective that exists in the science community some 50 leading scientists from all over the world were invited to participate in the project and contribute to the text With the scientific competence well in hand the dominating problem in producing the book has been to achieve a degree of consistency in style nomenclature notations and format as well as good cross referencing To what degree we have succeeded in reaching our goal of delivering a volume that will be useful to the community in both its comprehensiveness and readability remains to be decided by the readers The book is the outcome of a three year long process In December 1995 the study project on Source and Loss Processes of Magnetospheric Plasma was selected by ISSI after consultations with several groups of senior representatives of the space physics community

Introduction to Space Physics Margaret G. Kivelson, Christopher T. Russell, 1995-04-28 All aspects of space plasmas in the Solar System are introduced and explored in this text for senior undergraduate and graduate students Introduction to Space Physics provides a broad yet selective treatment of the complex interactions of the ionized gases of the solar terrestrial environment The book includes extensive discussion of the Sun and solar wind the magnetized and unmagnetized planets and the fundamental processes of space plasmas including shocks plasma waves ULF waves wave particle interactions and auroral processes The text devotes particular attention to space plasma observations and integrates these with phenomenological and theoretical interpretations Highly coordinated chapters written by experts in their fields combine to provide a comprehensive introduction to space physics Based on an advanced undergraduate and graduate course presented in the Department of Earth and Space Sciences at the University of California Los Angeles the text will be valuable to both students and professionals in the field
