Epstein, 2018 The essays in this book describe and analyze the current contours of the international financial system covering both developed and developing countries and focusing on the ways in which the current international financial system structures and is affected by profound inequalities in the international system This keen analysis of key topics in international finance takes a heterodox perspective with focus on the role of inequalities in power in shaping the structure and outcomes in the international sphere **The Handbook of the Political Economy of Financial Crises** Martin H. Epstein, 2005-01-01 Capital flight the unrecorded export of capital from developing countries often represents a significant cost for developing countries It also poses a puzzle for standard economic theory which would predict that poorer countries be importers of capital due to its scarcity This situation is often reversed however with capital fleeing poorer countries for wealthier capital abundant locales Using a common methodology for a set of case studies on the size causes and consequences of capital flight in developing countries the contributors address the extent of capital flight its effects and what

can be done to reverse it Case studies of Brazil China Chile South Africa Thailand Turkey and the Middle East provide rich descriptions of the capital flight phenomena in a variety of contexts The volume includes a detailed description of capital flight estimation methods a chapter surveying the impact of financial liberalization and several chapters on controls designed to solve the capital flight problem The first book devoted to the careful calculation of capital flight and its historical and policy context this volume will be of great interest to students and scholars in the areas of international finance and economic development
