Radiation Protection of Workers in Mines: a Report of Committee 4 of the International Commission on Radiation Protection International Commission on Radiation Protection, 1986 **Radiation Protection of Workers in Mines** International Commission on Radiological Protection. Committee 4, 1986 *ICRP Publication 47* ICRP, 2014-02-14

The purpose of this report is to describe the principles and applications of methods by which radiation hazards may be controlled in mines. Although primarily directed to the uranium mining industry, the information presented in this report may be applied in varying degree to all mines. Miners are exposed to airborne radon, thoron, and their short-lived decay products, to ore dust, and in some mines, particularly uranium and thorium mines, to external gamma and beta radiations. In general, the short-lived radon decay products present the dominant radiation risk. Radon is a member of the decay chain of uranium, which makes up about 3 ppm of the earth's crust. Consequently, radon is not limited to mines; it occurs everywhere outdoors in usually low concentrations and indoors in higher concentrations. In underground mines, the concentration of these radioactive contaminants, in the absence of adequate control measures, can reach relatively high values. The scope of this report excludes the treatment of the other hazards, mechanical and toxic, that are characteristic of all mining operations. However, the protective measures developed to control radiation exposures may influence the situation regarding other hazards.

Occupational Radiation Protection in the Uranium Mining and Processing Industry IAEA, 2020-06-05. This Safety Report has been developed as part of the IAEA programme on occupational radiation protection to provide for the application of its safety standards in implementing a graded approach to the protection of workers against exposures associated with uranium mining and processing. The publication describes the methods of production associated with the uranium industry and provides practical information on the radiological risks to workers in the exploration, mining, and processing of uranium. It is a compilation of detailed information on uranium mining and processing stages and techniques, general radiation protection considerations in the relevant industry, general methodologies applicable for control, monitoring, and dose assessment, exposure pathways, and radiation protection programmes for a range of commonly used mining and processing techniques.
