

Radiochemical Methods

Radiochemical methods are both sensitive and specific. There are three general types of radio-analytical methods of analysis:

1. Radiometric analysis
2. Isotope dilution, and
3. Activation analysis

Radiochemical Methods

D. Coomber

Radiochemical Methods:

Radiochemical Methods William J. Geary, 1986 This book presents the analytical uses of radioactive isotopes within the context of radiochemistry as a whole It is designed for scientists with relatively little background knowledge of the subject Thus the initial emphasis is on developing the basic concepts of radioactive decay particularly as they affect the potential usage of radioisotopes

Radiochemical Methods in Analysis D. Coomber, 2012-12-06 The aim of this book is to give an account of the principal radiochemical methods used in chemical analysis It is assumed that the reader already has some background knowledge of radioactivity available from several general textbooks For this reason some subjects e g the fundamentals of radio activity the properties of radiation statistics of counting procedures the precautions needed in working with radioactive materials which could have occupied half the text are not considered in detail The different aspects of radiochemical analysis have been covered by specialized books and reviews e g on activation analysis gamma spectrometry radiometric titrations A good deal of information is in the form of reports of meetings and symposia and liquid scintillation counting for instance has been mainly covered in this way There are also a large number of journals It is therefore hoped that this book will help fill the gap between the introductory texts and the specialized sources many of which are referred to in the chapter references The first three chapters in the present volume deal with the methods of measurement of radioactive nuclides Chapter I gives a general account of detection and measurement techniques The next two chapters are devoted to two specialized techniques gamma ray spectrometry and liquid scintillation counting

Radiochemistry G. W. A. Newton, 1972 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 90 years The Royal Society of chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume
