## **Rain In A Dry Season:**

Evaluation of the FAO response to the crisis in the Lake Chad Basin 2015–2018 Food and Agriculture Organization of the United Nations ,2021-01-28 Forty nine million people live in the Lake Chad region exploiting its rich natural resources and relatively constant supply of water fodder and fertile land all year round The area used to be a food production hub with local markets supplying produce to Cameroon Chad the Niger and Nigeria However poor natural resource management poor coordination across the different countries of the region and the widespread impact of climate change have contributed to the significant deterioration of the Lake s natural ecosystem capacity Agricultural soils and pastures have been widely degraded leading to a huge reduction in food productivity and thus job opportunities especially for the youth living in rural areas who account for a high percentage of the population Conflicts and tensions have created a conducive context for young people in search of income and opportunities to join the Boko Haram terrorist movement originated in Nigeria This evaluation was conducted to address FAO s response to the Lake Chad Basin crisis including interventions conducted in 2015 2018 as FAO published the Lake Chad Basin Crisis Response Strategy 2017 2019 to address the needs of the identified 6 9 million people affected by soaring food insecurity in the Lake Chad Basin in early 2017 The objectives of this evaluation were to analyse FAO s responses to the crisis at operating level with a focus on efficiency effectiveness and sustainability while assessing the relevance and consistency of the regional approach from a strategic perspective The evaluation team visited many of the areas concerned and at the end of each visit they organized a debriefing session with the respective FAO country team to share information gathered and collect complementary data and analysis to inform its deliberations This helped to ensure transparency in the data collection process and to maximize the learning process For FAO to support the food security and nutrition of communities in the Lake Chad region effectively a regional strategy focused on supporting the resilience of communities is relevant and appropriate Complementary to FAO s country based programmes a regional strategy bears the potential to devise interventions that adapt to the cross border nature of issues that each country faces and would allow supporting a more cohesive and collaborative way of working Based on the Regional Response Strategy 2017 2019 FAO should revise its strategy and approach by incorporating governmental objectives and translate it into an operational action plan in line with other partners strategies in the region

*Agriculture and Adaptation in Bangladesh* Timothy S. Thomas,Khandaker Mainuddin,Catherine Chiang,Aminur Rahman,Anwarul Haque,Nazria Islam,Saad Quasem,Yan Sun,2013-07-29 Bangladesh is extremely vulnerable to the impact of climate change because it is a low lying flat country subject to both riverine flooding and sea level rise and because a large portion of its population is dependent on agriculture for its livelihood The goal of this research was to examine the likely

impacts of climate change on agriculture in Bangladesh and develop recommendations to policymakers to help farmers adapt to the changes In this study we use climate data from four general circulation models GCMs to evaluate the impact of climate change on agriculture in Bangladesh by 2050 We use the DSSAT Decision Support System for Agrotechnology Transfer crop modeling software to evaluate crop yields first for the 1950 to 2000 period actual climate and then for the climates given by the four GCMs for 2050 We evaluate crop yields at 1 789 different points in Bangladesh using a grid composed of roughly 10 kilometer km squares for 8 different crops in 2000 and 2050 For each crop we search for the best cultivar variety at each square rather than limiting our analysis to a single variety for all locations We also search for the best planting month in each square In addition we explore potential gains in changing fertilizer levels and in using irrigation to compensate for rainfall changes This analysis indicates that when practiced together using cultivars better suited for climate change and adjusting planting dates can lessen the impacts of climate change on yields especially for rice and in some cases actually result in higher yields In addition the analysis shows that losses in yield due to climate change can be compensated for for many crops by increasing the availability of nitrogen in the soil Moreover we used a household survey to collect information on the incidence of climatic shocks in the last five years and adaptation options The survey was conducted from December 2010 to February 2011 covering data from the previous production year The results confirm that Bangladesh farmers already perceive the impacts of climate change In particular the survey results indicate that of all climate change related shocks floods waterlogging and river erosion caused the largest loss to rice production Farmers in our survey lost around 12 percent of their harvest on average to some kind of shock with about half of that attributable to flooding related issues The second leading cause of rice crop loss was pests responsible for around 3 percent of production Taken together the results indicate that adaptation efforts in Bangladesh should include adjusting planting dates using improved cultivars better suited for climate change improving fertilizer application exploring increased maize production and bolstering flood and pest protection for farmers
