Remaking Life And Death:

Remaking Life & Death Sarah Franklin, Margaret M. Lock, 2003 This volume reflects the growing international concern about the issues of organ transplantation new reproductive and genetic technologies and embryo research It examines the political economy of body parts organ and tissue harvesting bio prospecting and the patenting of life forms as well as governance and regulation in cloning organ transplantation tissue engineering and artificial life system procedures It reaffirms the value of cross cultural comparison and assesses advances in bioscience

Remaking Life and Death Sarah Franklin, Margaret Lock, 2003 **An Anthropology of Biomedicine** Margaret M. Lock, Vinh-Kim Nguyen, 2011-09-09 An Anthropology of Biomedicine is an exciting new introduction to biomedicine and its global implications Focusing on the ways in which the application of biomedical technologies bring about radical changes to societies at large cultural anthropologist Margaret Lock and her co author physician and medical anthropologist Vinh Kim Nguyen develop and integrate the thesis that the human body in health and illness is the elusive product of nature and culture that refuses to be pinned down Introduces biomedicine from an anthropological perspective exploring the entanglement of material bodies with history environment culture and politics Develops and integrates an original theory that the human body in health and illness is not an ontological given but a moveable malleable entity Makes extensive use of historical and contemporary ethnographic materials around the globe to illustrate the importance of this methodological approach Integrates key new research data with more classical material covering the management of epidemics famines fertility and birth by military doctors from colonial times on Uses numerous case studies to illustrate concepts such as the global commodification of human bodies and body parts modern forms of population and the extension of biomedical technologies into domestic and intimate domains Winner of the 2010 Prose Award for Archaeology and Anthropology *The Politics of Life Itself* Nikolas Rose, 2009-02-09 For centuries medicine aimed to treat abnormalities But today normality itself is open to medical modification Equipped with a new molecular understanding of bodies and minds and new techniques for manipulating basic life processes at the level of molecules cells and genes medicine now seeks to manage human vital processes The Politics of Life Itself offers a much needed examination of recent developments in the life sciences and biomedicine that have led to the widespread politicization of medicine human life and biotechnology Avoiding the hype of popular science and the pessimism of most social science Nikolas Rose analyzes contemporary molecular biopolitics examining developments in genomics neuroscience pharmacology and psychopharmacology and the ways they have affected racial politics crime control and psychiatry Rose analyzes the transformation of biomedicine from the practice of healing to the government of life the new emphasis on treating disease susceptibilities rather than disease the shift in our understanding of the patient the emergence of new forms of medical activism the rise of biocapital and the mutations in biopower He concludes that these developments have profound consequences for who we think we are and who we want to be *The Right to Life and the Value of Life* Jon

Yorke,2016-03-03 This groundbreaking book is the first collection to investigate the law political science and ethical perspectives collectively in relation to the right and value of life Its contributions from international roster of scholars are organized around five themes a theoretical positioning of life and death War armed conflict and detention Death as punishment Medical parameters for ending life and medical policies for the preservation of life In studying this issue in its contemporary contexts of right and value the volume fills the current scholarly lacuna in the general subject of the orientations of life It presents a much needed examination of key issues in a broad practical and theoretical context and holds broad appeal for scholars researchers and students occupied with issues of war armed conflict the death penalty and various contemporary medico legal scenarios Death Matters Tora Holmberg,Annika Jonsson,Fredrik Palm,2019-04-05 This book investigates death as part of contemporary everyday experience and practices Through a cultural sociological lens it studies death as it remains constantly at the edge of our consciousness shaping the ways in which we move through social reality As such Death Matters is a significant contribution to death studies going beyond traditional parameters of the field by addressing the cultural omnipresence of death The contributions analyse several death related meaning making processes arguing that meanings emerging from culturally shared narratives social institutions and material conditions are just as important as death practices in understanding the role of death in society Drawing on the related themes of places of absence and presence disease and bodies and persons and non persons the authors explore a variety of areas of social life from haunting to celebrity deaths to move the notion of death from the margins of social reality to ongoing everyday life This far reaching collection will be of use to scholars and students across death studies sociology anthropology philosophy culture media and communication studies **The Future of Aging** ,2010-08-17 Just as the health costs of aging threaten to bankrupt developed countries this book makes the scientific case that a biological bailout could be on the way and that human aging can be different in the future than it is today Here 40 authors argue how our improving understanding of the biology of aging and selected technologies should enable the successful use of many different and complementary methods for ameliorating aging and why such interventions are appropriate based on our current historical anthropological philosophical ethical evolutionary and biological context Challenging concepts are presented together with in depth reviews and paradigm breaking proposals that collectively illustrate the potential for changing aging as never before The proposals extend from today to a future many decades from now in which the control of aging may become effectively complete Examples include sirtuin modulating pills new concepts for attacking cardiovascular disease and cancer mitochondrial rejuvenation stem cell therapies and regeneration tissue reconstruction telomere maintenance prevention of immunosenescence extracellular rejuvenation artificial DNA repair and full deployment of nanotechnology The Future of Aging will make you think about aging differently and is a challenge to all of us to open our eyes to the future therapeutic potential of biogerontology *Cloning Wild Life* Carrie Friese,2013-09-02 In this brilliant study of cloned wild life Carrie

Friese adds a whole new dimension to the study of reproduction illustrating vividly and persuasively how social and biological reproduction are inextricably bound together and why this matters Sarah Franklin author of *Dolly Mixtures the Remaking of Genealogy* The natural world is marked by an ever increasing loss of varied habitats a growing number of species extinctions and a full range of new kinds of dilemmas posed by global warming At the same time humans are also working to actively shape this natural world through contemporary bioscience and biotechnology In *Cloning Wild Life* Carrie Friese posits that cloned endangered animals in zoos sit at the apex of these two trends as humans seek a scientific solution to environmental crisis Often fraught with controversy cloning technologies Friese argues significantly affect our conceptualizations of and engagements with wildlife and nature By studying animals at different locations Friese explores the human practices surrounding the cloning of endangered animals She visits zoos the San Diego Zoological Park the Audubon Center in New Orleans and the Zoological Society of London to see cloning and related practices in action as well as attending academic and medical conferences and interviewing scientists conservationists and zookeepers involved in cloning Ultimately she concludes that the act of recalibrating nature through science is what most disturbs us about cloning animals in captivity revealing that debates over cloning become in the end a site of political struggle between different human groups Moreover Friese explores the implications of the social role that animals at the zoo play in the first place how they are viewed consumed and used by humans for our own needs A unique study uniting sociology and the study of science and technology *Cloning Wild Life* demonstrates just how much bioscience reproduces and changes our ideas about the meaning of life itself Carrie Friese is Lecturer in Sociology at the London School of Economics and Political Science

The Educated Eye Nancy A. Anderson, 2012 The creation and processing of visual representations in the life sciences is a critical but often overlooked aspect of scientific pedagogy *The Educated Eye* follows the nineteenth century embrace of the visible in new spectatoria or demonstration halls through the twentieth century cinematic explorations of microscopic realms and simulations of surgery in virtual reality With essays on Doc Edgerton's stroboscopic techniques that froze time and Eames's visualization of scale in *Powers of Ten* among others contributors ask how we are taught to see the unseen
