Remediation Manual for Petroleum Contaminated Sites David L. Russell, 1992-11-23 Based on proven investigation into cleanup techniques the material in this manual gives engineers a working knowledge of the field and a basis for making key decisions during the cleanup process It is easy to get petroleum into the ground but hard to get it back out again The problem does not exist in the groundwater or the soil alone but in a dynamic balance between the soil water and air in the soil Gasoline and any of its volatile components can and do move between the soil air and water and they cost billions of dollars every year in contamination cleanup This new book provides the information needed for cost and time effective petroleum contaminated site cleanup Originally developed as an oil company s training aid this book discusses the hows and whys of site cleanup geology data gathering cleanup alternatives remediation costs and management of consultants contractors Plus the book contains a critical examination of the benefits and limitations of each type of remediation technology There is never only one way to clean up a particular site The choice of the method of cleanup is one of the greatest factors affecting the cost Another important cost factor is the level of cleanup required to satisfy the regulatory cleanup community This new book will not only provide a fundamental understanding of site remediation techniques but also the knowledge to make cost effective environmentally sound choices during the remediation process Copies of this handy manual are available for immediate delivery An order form follows the detailed table of contents on the reverse

Handbook of Diagnostic Procedures for Petroleum-Contaminated Sites (RESCOPP Project, EU813) Paul Lecomte, Claudio Mariotti, 1997-07-07. This handbook is a practical guide for the methods and procedures required in assessing the nature, degree, and related risk of hydrocarbon pollution in contaminated sites. As such, it is the first of its kind, which focuses on the techniques for investigating and remediating oil-contaminated sites within a specifically European context. It is the result of a four-year research and development programme initiated by the European Union, named RESCOPP: The Remediation of Soils Contaminated by Petrochemical Products. The approach is to combine a review of the current state of the art, diagnostic procedures for petroleum-contaminated sites, with the experiences of such activities by several companies directly involved in this field. The contents include an introduction to the types of product involved, preliminary studies required in assessing a contaminated site, and field survey activities, results analysis, and survey costs involved. The main text is supported by
