Abstract

Agriculture plays a vital role in every nation economy every nation. It represents a substantial trading industry for an economically strong country. Remote sensing and Geographic information system used to analyze and visualize agricultural environments has proved to be very beneficial to farming community as well as industry. In this paper I tried to overview application of remote sensing and geographic information systems in agriculture and natural resource management. Reliable and timely information on types of crops grown, their area and expected yield is importance for government for agriculturally based country. Applications of different remote sensing techniques are important for crop monitoring, crop condition assessment and yield estimation for sustainability of agriculture and natural resources. The spectral information is the important aspect of remote sensing data for crop modeling and it is strongly related with canopy parameters which are the representative of crop health and crop growth stages. Remote sensing and GIS can also be used very effectively in land use / land cover analysis as well as damage assessment because of drought, floods and other extreme weather events. Information on meteorology and vegetation are the two major important inputs into agricultural meteorology Applications of remote sensing technologies are important and effective method to identify pest-infested and disease. It is one of the effective tools for assessing and monitoring the water resources.

Introduction

Agriculture plays a vital role in every nation economy. It represents a substantial trading industry for an economically strong country. Production of food in a cost-effective manner is the essential goal of every farmer, large-scale farm manager and regional agricultural agency. Remote sensing and Geographic information system used to analyze and visualize agricultural environments has proved to be very beneficial to farming community as well as industry. It plays great role in agriculture throughout the world by helping farmers in increasing production, reducing costs and managing their land more efficiently. Geographic information systems (GIS) has been widely applied and been recognized as effective and powerful tool in detecting land cover and land use change [1]. Using remote sensing and GIS are important to understand the health of crop, extent of infestation, potential yield and soil conditions. It applied to explore agricultural applications such as crop identification, area estimation, crop condition assessment, soil moisture estimation, yield estimation, agriculture water management, agro meteorological etc.

Applications of remote sensing in agriculture including major important things such as; biomass and yield estimation, vegetation vigor and drought stress monitoring, assessment of

crop phenological development, crop acreage estimation and cropland mapping, mapping of disturbances and land use land cover changes in addition to precision agriculture and irrigation management [2]. GIS based mapping application can help to identify location of crops growing across the country and to adapt different variables, monitor the health of individual crops, estimate yields from a given field, and maximize crop production. By using land-use and primary food crop statistics, along with data collected by different tools including mobile devices able to identify areas in need and underlying causes of food insecurity. GIS is an instrumental in the efforts to end global hunger and it is an integral part of automated field operations.

Using data collected from remote sensors, and from sensors mounted directly on farm machinery, farmers have improved decision-making capabilities for planning their cultivation to maximize yields. Previous crop yields, terrain specifics, organic matter content, pH, moisture, and nutrient levels of the soil all add in proper preparation for precise farming. Combine harvesters equipped with GPS tracking units can measure crop yields along with crop quality values like plant water content and chlorophyll levels in real time and at the exact location in the field from which they are harvested. Remote Sensing and GIS for Natural Resource Management Clare H. Power, L. J. Rosenberg, I. Downey, 1996 The global demand for environmental status and impact monitoring has resulted in an increasing need for resource managers and practitioners of remote sensing and GIS technology to work closely together In catering for this need this publication reports on a one day technical workshop which brought together both users and practitioners of remote sensing and GIS in natural resource management in order to gain awareness of other activities and to discuss the issues problems and solutions they have found *Geospatial Technology for Natural Resource Management* Shruti Kanga, Gowhar Meraj, Suraj Kumar Singh, Majid Farooq, M. S. Nathawat, 2024-11-20 This book is essential for anyone interested in understanding and implementing sustainable resource development strategies as it covers the crucial first stage of assessing resource availability and condition along with the use of modern geospatial technologies such as remote sensing GIS and GPS for surveying mapping and monitoring various resources for global environmental protection and sustainable development The first step in developing a sustainable resource strategy is assessing the availability and condition of resources This involves evaluating baseline levels identifying trends and understanding their consequences Mitigation policies are then developed based on this assessment Modern geospatial technologies like Remote Sensing RS Geographic Information Systems GIS and Global Positioning Systems GPS offer powerful tools for surveying mapping and monitoring both renewable and nonrenewable resources These technologies support global environmental protection disaster management and sustainable development by providing repetitive and global data GPS provides accurate geographic coordinates while GIS allows visualization analysis and decision making through spatial data enabling the study of complex environmental and natural resource challenges at various scales **Textbook on Remote Sensing in Natural Resources Monitoring and Management** Chaitanya S.
