Remote Sensing of Atmosphere and Ocean from Space: Models, Instruments and Techniques Frank S. Marzano,Guido Visconti,2003-01-31 This book is a collection of the lectures held at the International Summer School ISSAOS 2000 in L Aquila Italy given by invited lecturers coming from both Europe and the USA The goal of the book is to provide a broad panorama of spaceborne remote sensing techniques at both microwave and visible infrared bands and by both active and passive sensors for the retrieval of atmospheric and oceanic parameters A significant emphasis is given to the physical modeling background instrument potential and limitations inversion methods and applications Topics on international remote sensing programs and assimilation techniques into numerical weather forecast models are also touched The main purpose of the book is to offer to young scientists Ph D or equivalent students and to all who would like to have a broad spectrum understanding of spaceborne remote sensing capabilities introductory material to each remote sensing topic written by the most qualified experts in the field

Polar Remote Sensing Dan Lubin,Robert Massom,2006-08-31 The polar regions perhaps more than any other places on Earth give the geophysical scientist a sense of exploration This sensibility is genuine for not only is high latitude eldwork arduous with many locations seldom or never visited but there remains much fundamental knowledge yet to be discovered about how the polar regions interact with the global climate system The range of opportunities for new discovery becomes strikingly clear when we realize that the high latitudes are not one region but are really two vastly di erent worlds The high Arctic is a frozen ocean surrounded by land and is home to fragile ecosystems and unique modes of human habitation The Antarctic is a frozen continent without regular human habitation covered by ice sheets taller than many mountain ranges and surrounded by the Earth s most forbidding ocean When we consider global change as applied to the Arctic we discuss impacts to a region whose surface and lower atmospheric temperatures are near the triple point of water throughout much of the year The most consistent signatures of climate warming have occurred at northern high latitudes IPCC 2001 and the potential impacts of a few degrees increase in surface temperature include a

reduction in sea ice extent a positive feedback to climate warming due to lowering of surface albedo and changes to surface runoff that might affect the Arctic Ocean's salinity and circulation

Microwave Radiation of the Ocean-Atmosphere Alexander G. Grankov, Alexander A. Milshin, 2015-12-18 The book describes different approaches to the analysis of heat and dynamic processes in the ocean atmospheric interface with satellite passive radiometric observations at microwaves It examines the feasibility of determining synoptic seasonal and year to year variations of sensible latent and momentum fluxes to a useful accuracy using the DMSP SSM I and EOS Aqua AMSR E data directly from the measured brightness temperatures An important object in the studies is the North Atlantic with emphasize on the areas with high midlatitude cyclon activity here the main results have been obtained by combining data from the vessel experiments NEWFOUEX 88 ATLANTEX 90 and the data of microwave radiometers from the DMSP and EOS Aqua satellites The role of vertical turbulent and horizontal advective heat transfer in forming interrelations between the brightness temperature of the system ocean atmosphere and surface heat fluxes in the range of synoptic time scales is analyzed Special sections of the book describe some results of analysis of reaction of the system ocean atmosphere on passing of the tropical cyclone Katrina August 2005 in the Florida Strait as well as a behavior of the system in the period of a time preceding to origination the cyclone Humberto September 2007 in the Mexico Gulf The long term goal of this research is the search for effects and regularities which can explain the reasons for the tropical cyclones appearance Some characteristics of the tropical cyclones brightness temperature and heat contrasts etc are compared with those for midlatitude cyclones At the same time as covering a key topic area with implications for global warming research this text is also usefull to students who want to gain insight into application of satellite microwave radiometric methods for studying the air sea interaction Key themes microwave radiometry air sea interaction midlatitude and tropical cyclones atmosphere boundary layer heat and momentum surface fluxes
