

Remote Sensing

The GOES-16 and GOES-17 Advanced Baseline Imager (ABI) measures reflected and emitted energy to obtain information about Earth's atmosphere, land and ocean.

ABI's visible channels capture sunlight reflected off Earth and only see during the daytime.

VISIBLE REFLECTED ENERGY

ABI's infrared channels detect energy that is not visible to the human eye. They collect energy that is emitted by objects such as the surface of Earth and clouds. ABI can detect infrared energy day or night.

Remote Sensing Of The Lower Atmosphere An Introduction:

Remote Sensing of the Lower Atmosphere Graeme L. Stephens, 1994 This book is an introductory graduate level text on atmospheric remote sensing The basic interaction between radiation and the atmosphere is examined and illustrated with actual sensing examples The focus is on understanding the interactions rather than on presenting mathematical details The text also serves to supplement atmospheric radiation topics placing the technology and its application in the broader perspective of contemporary meteorology and atmospheric science Each chapter is followed by a series of exercises and Appendix 2 gives five computer projects designed for classroom applications Remote sensing of the lower atmosphere G.L. Stephens, 2010 BASICS OF ATMOSPHERIC SCIENCE, SECOND EDITION CHANDRASEKAR, A., 2022-09-01 The new edition of this book continues to provide a detailed treatment of various aspects of atmospheric phenomena and their underlying physical principles It offers a study of both physical and dynamical aspects of the atmosphere After discussing the fundamental processes such as origin of the atmosphere atmospheric thermodynamics atmospheric radiation and cloud and precipitation formation the book focuses on equipping students with a thorough understanding of weather and climate New in this edition The new edition includes i A new chapter on Climate system dealing with important differences between local regional and global climates and provides detailed description of all the five components of the climate system ii Important issues of global warming and climate change together with detailed exposition of its causes and effects iii Additional material is included in Chapter 8 that deals with Atmospheric Boundary layer ABL structure and its formation as well as Monin Obukhov similarity theory iv Additional material is included in Chapter 3 that deals with derivation of Saturated Adiabatic Lapse Rate v Chapter 10 Large Scale Meteorological systems in the Mid Latitudes includes quasi geostrophic approximation and the associated quasi geostrophic equations Target Audience Intended primarily as an introductory textbook for the postgraduate students of atmospheric sciences geophysics and meteorology this book would also be extremely useful to all those engaged in meteorological research Integrated Ground-Based Observing Systems Domenico Cimini, Frank S. Marzano, Guido Visconti, 2010-09-15 The book is a collection of the lectures delivered during the 7th International Summer School on Atmospheric and Oceanic Sciences ISSAOS titled Integrated Ground Based Observing Systems Applications for Climate Meteorology and Civil Protection Its aim is to contribute to the scientific understanding of basic concepts and applications of integrated ground based observing systems The first part describes the most common instrumentations showing their strengths and limitations Furthermore strategic plans for the deployment of an observation site are discussed along with an overview of techniques for integrating heterogeneous data The second part introduces cutting edge applications including assimilation in numerical weather prediction climate benchmarking air quality monitoring and meteorological warnings Observation, Theory And Modeling Of Atmospheric Variability - Selected Papers Of Nanjing Institute Of Meteorology Alumni In Commemoration Of Professor Jijia Zhang Xun Zhu, Xiaofan Li, Ming Cai, Shuntai

Zhou, Yuejian Zhu, Fei-fei Jin, Xiaolei Zou, Minghua Zhang, 2004-02-25 This book contains tutorial and review articles as well as specific research letters that cover a wide range of topics 1 dynamics of atmospheric variability from both basic theory and data analysis 2 physical and mathematical problems in climate modeling and numerical weather prediction 3 theories of atmospheric radiative transfer and their applications in satellite remote sensing and 4 mathematical and statistical methods The book can be used by undergraduates or graduate students majoring in atmospheric sciences as an introduction to various research areas and by researchers and educators as a general review or quick reference in their fields of interest

The Himalaya Dilemma Sandipan Ghosh, 2025-10-10 The Himalaya Dilemma Navigating Risk Vulnerability and Resilience in Geohazard Prone Regions is a collaborative effort to explore and understand the multiple dangers the Himalayas face including landslides earthquakes glacial lake outburst floods terrain instability anthropogenic landscape alterations and ecosystem fragility Often called the Roof of the World and the Third Pole the Himalayas are among Earth's most breathtaking yet geologically active mountain ranges While these majestic peaks inspire awe they also conceal a complex interplay of geological risks environmental challenges and socioeconomic vulnerabilities At the heart of the volume lies the theme The Himalaya at Risk emphasizing the urgent need to bridge the gap between hazard management community action policy development and scientific research Integrating insights from geology geomorphology geography environmental science disaster management and sustainable development the book offers a comprehensive overview of the region's risk environment The Himalaya Dilemma is intended for a diverse readership including academics and researchers in the fields of geology environmental science disaster risk management and climate studies policymakers and development practitioners involved in building disaster resilience and promoting sustainable development in mountain regions as well as students seeking a deeper understanding of Himalayan geohazards and the broader consequences of environmental change

Satellite Measurements of Clouds and Precipitation Hirohiko Masunaga, 2022-04-26 This book provides a thorough introductory description of the physical principles underlying the satellite remote sensing of clouds and precipitation A diverse collection of satellite sensors is covered including imagers radars and sounders over a broad spectral range from visible to microwave radiation The progress in satellite instrument technology during the past two decades as represented by the Tropical Rainfall Measuring Mission TRMM CloudSat and Global Measurement Mission GPM satellites has drastically improved our capability of measuring clouds and precipitation across the globe At the same time such rapid progress makes it increasingly challenging for scientists without specialized skills in remote sensing to fully grasp how satellite measurements are being made This book is designed to mitigate that challenge The targeted readers are graduate students and professional scientists seeking an extended summary of the theoretical background behind observations from space ranging from fundamental physics the statistical mechanics and radiative processes for instance to more practical levels of theory such as retrieval algorithm design

Ensuring the Climate Record from the NPOESS and GOES-R Spacecraft

National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on a Strategy to Mitigate the Impact of Sensor Descopes and Demanifests on the NPOESS and GOES-R Spacecraft, 2008-09-25 In 2000 the nation's next generation National Polar orbiting Operational Environmental Satellite System NPOESS program anticipated purchasing six satellites for 6.5 billion with a first launch in 2008. By November 2005 however it became apparent that NPOESS would overrun its cost estimates by at least 25 percent. In June 2006 the planned acquisition of six spacecraft was reduced to four the launch of the first spacecraft was delayed until 2013 and several sensors were canceled or descoped in capability. Based on information gathered at a June 2007 workshop Options to Ensure the Climate Record from the NPOESS and GOES-R Spacecraft this book prioritizes capabilities especially those related to climate research that were lost or placed at risk following the 2006 changes. This book presents and recommends a prioritized short term strategy for recovery of crucial climate capabilities lost in the NPOESS and GOES-R program descopes. However mitigation of these recent losses is only the first step in establishing a viable long term climate strategy one that builds on the lessons learned from the well intentioned but poorly executed merger of the nation's weather and climate observation systems. *Advanced Technologies, Systems, and Applications X* Naida Ademović, Zlatan Akšamija, Almir Karabegović, 2025-10-19 This book presents the proceedings of the 16th Days of the Bosnian Herzegovinian American Academy of Arts and Sciences BHAAAS held in Sarajevo Bosnia and Herzegovina from June 19-22 2025. The Conference Proceeding Book showcases the outcomes of seven dynamic technical sessions covering a broad spectrum of topics AI Across Disciplines Transformative applications in various fields civil engineering mechanical engineering advanced electrical power systems data science and geographic information systems information and communication technologies.
