Renal Cell Carcinoma:

Renal Cell Carcinoma Ronald M. Bukowski, Andrew Novick, 2000-04-10 Renal cell carcinoma represents a heterogeneous group of tumors the most common of which is clear cell adenocarcinoma The annual incidence of this tumor appears to be rising and approximately 12 000 individuals die from this cancer annually in the United States One third of patients who present have metastatic disease at the time of diagnosis and another 40% who undergo nephrectomy will ultimately develop this complication Over the past 10 years a significant amount of new information concerning the epidemiology molecular and immunologic characteristics and therapy for patients with these tumors has appeared The recognition that inherited forms of renal cancer exist and that chromosomal abnormalities can be identified in these tumors suggested a genetic basis for renal cell carcinoma The familial cancer syndrome Von Hippel Lindau disease provided the setting in which the genetic abnormalities associated with the development of renal cancer were first described Abnormalities of the VHL gene have also been detected in sporadic clear cell carcinoma and it has now been recognized that approximately 80 % of these tumors will demonstrate characteristic alterations Currently the functions of the VHL protein are being investigated and the biology of clear cell carcinoma of the kidney is under study Additionally papillary carcinomas of the kidney appear to express different molecular defects and these are now being unraveled

Renal Cell Carcinoma Steven C. Campbell, Brian I. Rini, 2012-09-26 Renal Cell Carcinoma Clinical Management provides a comprehensive state of the art review of this field and will serve as a valuable resource for clinicians surgeons and researchers with an interest in kidney cancer The volume reviews new data about risk factors for the disease profiles the new staging system for renal cell carcinoma RCC highlights our current understanding of familial syndromes of RCC and their molecular genetics and provides new perspectives about imaging of renal tumors For localized disease a greater appreciation of nephron sparing approaches and the importance of preservation of renal function is discussed in detail Advances in surgical techniques are highlighted For metastatic disease the molecular biology of kidney cancer is reviewed in a concise and understandable manner including the data that has fostered novel targeted approaches that have revolutionized management The several landmark phase III targeted therapy trials published in the last few years are placed in context with respect to current management Integration of surgery and systemic therapy through cytoreductive and consolidative approaches has yielded provocative data that promises to further advance the field and major advances in this domain are also be discussed

Tannir,2014-10-08 While patients with metastatic renal cell carcinoma mRCC are now living longer with improved quality of life the success of novel therapies for mRCC has created challenges for practicing oncologists Many patients who initially respond to targeted therapies ultimately develop progressive disease due to acquired resistance to these agents Additionally some patients do not respond at all to any of the currently approved targeted agents underscoring the need for continued and concerted efforts to identify other relevant targets and pursue alternative therapeutic strategies Part of the Oxford American Oncology Library Renal Cell Carcinoma is a concise handbook that addresses the complex management of patients with mRCC The book begins with a review of the epidemiology pathology and biology of renal cell carcinoma followed by chapters on specific targeted therapies and managing complications The final chapters discuss supportive and integrative care and emerging therapies *Renal Cell Carcinoma* Mototsugu Oya,2017-02-14 This book provides a comprehensive review of diagnosis and treatments of renal cell carcinoma RCC for practitioners and researchers with an interest in this disease A major aim of the book is to present the most important and most recent advances in molecular bases and targeted therapy for this neoplasm The remarkable resistance to chemotherapy and radiotherapy and the minimum contribution of cancer genes that commonly mutate in other adult epithelial cancers have

made RCC highly distinct from other types of solid neoplasms In the past decade however treatment options for RCC have been expanding and moving quickly toward laboratory based and molecular targeted therapies Advances in RCC therapy also have brought novel treatment options to other types of cancer such as a TKI for hepatocellular carcinoma and gastrointestinal tumors as well as mTOR inhibitors to progressive neuroendocrine tumors of pancreatic origin and to breast cancer suggesting that RCC is no longer an orphan disease in the field of molecular oncology Additional topics covered in the book include pharmacokinetics and pharmacodynamics in molecular targeted agents and the putative mechanism of resistance to anti angiogenic agents such as intratumoral heterogeneity or cancer stem cell population This volume provides the latest and most useful information for all readers who are eagerly devoted to curing renal cell carcinoma **Renal**
