Renal Protective Effect Of Ace Inhibition And Angiotensin Ii Blockade:

Renal Protective Effect of ACE Inhibition and Angiotensin II Blockade Giuseppe Remuzzi, 1996-01-01 This timely issue reviews new therapeutic strategies for preventing or delaying renal disease progression Special attention is given to pharmacologic interventions aimed at inhibiting the synthesis of angiotensin II or blocking its biological activity at the receptor level The papers presented in this issue provide thorough coverage of the topic from the role of the renin angiotensin system in the local control of renal function to the protective effects of ACE inhibitors in diabetes Taken together the studies document that when urinary protein excretion is reduced by pharmacologic interventions a proportional reduction in the rate of renal disease progression can be achieved Clinical trials are now being carried out to investigate whether angiotensin II receptor blockade offers advantages compared to ACE inhibitors in slowing renal disease progression All those wishing to learn about the latest advances will appreciate this valuable update *Seldin and Giebisch's The Kidney* Robert J. Angiotensin II Receptor Antagonists Mancina Giuseppe, 2000-07-03 Since angiotensin II is one of the most potent vasoconstrictors and an important stimulus for the secretion of aldosterone from the adrenal gland the development of angiotensin II inhibitors is an important step in regulating blood pressure This class of drug is well tolerated by patients and these drugs have the added advantage over ACE inhibitors in that they are not associated with cough Because most drugs can be given once daily and like ACE inhibitors they have a useful additive hypotensive effect in combination with diuretics they are a welcome therapeutic tool in the treatment of hypertension **Cumulated Index Medicus**, 2000 Angiotensin Vol. II Thomas Unger, Bernward A.
