

# MACROECONOMIC POLICY

- In terms of short-to-medium term stabilization policy, there are two main instruments: fiscal and monetary policy
- In a closed economy there are two main targets/objectives: low inflation and low unemployment (or high employment)
- Generally, one needs a many instruments as targets, and one should assign instruments to targets appropriately
- In an open economy, the exchange rate may be a target, or completely fixed, in which case monetary policy gets subordinated. Eurozone membership is an extreme case of this
- In small open economies fiscal policy can be somewhat effective, but import leakages can limit effectiveness severely
- For Ireland, instead of monetary policy (control of  $M_s$  or of Short-term nominal Int rate), we now see that financial regulation is central to macroeconomic stability

**Inside a Modern Macroeconometric Model** Alan A. Powell,Christopher W. Murphy,2012-12-06 As Ken Wallis 1993

has pointed out all macroeconomic forecasters and policy analysts use economic models That is they have a way of going from assumptions about macroeconomic policy and the international environment to a prediction of the likely future state of the economy Some people do this in their heads Increasingly though forecasting and policy analysis is based on a formal explicit model represented by a set of mathematical equations and solved by computer This provides a framework for handling in a consistent and systematic manner the ever increasing amounts of relevant information Macroeconometric modelling though is an inexact science A manageable model must focus only on the major driving forces in a complex economy made up of millions of households and firms International economic agencies such as the IMF and OECD and most treasuries and central banks in western countries use macroeconometric models in their forecasting and policy analysis Models are also used for teaching and research in universities as well as for commercial forecasting in the private sector
