Macromodels of the National Economy of the USSR V.V. Kolbin, 2012-12-06 Rapid methodological progress is now taking place in the USSR in the solution of the problems of developing both society and economy A considerable proportion of the total methodological problems of the USSR economy are dealt with in the present monograph This work is intended for economists managers and specialists in methodology sociology and applied mathematics and it may also be useful to researchers into operations as well as to politicians philosophers and wide circles of readers interested in the present and future problems of the USSR economy Readers will find here I hope answers to many questions At the same time this work can be used as a manual for students and post graduate students investigating countries with centrally planned economies For his monograph the author has used the material originally developed for a special course of lectures called Macromodels of Planning Some sections of the book correspond to the subjects of courses on Mathematical Programming and Operations Research as well as to the subjects of special courses on Methods of Vector Optimization Stochastic Programming Parametric Programming and Decomposition Methods of Programming read by the author from 1971 to 1976 to the graduates and post graduates of the department of applied mathematics and management processes at Leningrad University

Systems Optimization Methodology V. V. Kolbin, 1998 This monograph defines the notion of a system by reference to those systems which exhibit goal oriented behavior and utilize the notion of decision making and controls Such systems allow for phenomenological description and fix the nature of causal transformations of input effects into output quantities The study of consequences of the fact that the systems possess some properties constitutes the content of systems optimization methodology which goes beyond the scope of descriptive classification of systems Chapter 1 deals with philosophical problems of systems methodology An attempt is made to systematize and analyze the problems of scientific methodology as applied to systems modeling methodology which is viewed as the most general concept utilized in modern science Chapter 2 focuses on problems of qualitative analysis in natural and social sciences Attention is drawn to problems of measurement theory and quantitative analysis of systems Approaches and methods of systems analysis and synthesis form the central portion of the book Much study is given to the methods of systems decomposition an integration using both discrete and continuous descriptions of objects processes and phenomena Examples of complex goal oriented systems are also provided The remaining part of the book is largely centered around the methodology of multiobjective systems optimization

Systems Optimization Methodology, Part 1 Vyacheslav V Kolbin, 1998-11-23 This monograph defines the notion of a system by reference to those systems which exhibit goal oriented behavior and utilize the notion of decision making and controls Such systems allow for phenomenological description and fix the nature of causal transformations of input effects into output quantities The study of consequences of the fact that the systems possess some properties constitutes the content of systems optimization methodology which goes beyond the scope of descriptive classification of systems Chapter 1 deals

with philosophical problems of systems methodology An attempt is made to systematize and analyze the problems of scientific methodology as applied to systems modeling methodology which is viewed as the most general concept utilized in modern science Chapter 2 focuses on problems of qualitative analysis in natural and social sciences Attention is drawn to problems of measurement theory and quantitative analysis of systems Approaches and methods of systems analysis and synthesis form the central portion of the book Much study is given to the methods of systems decomposition an integration using both discrete and continuous descriptions of objects processes and phenomena Examples of complex goal oriented systems are also provided The remaining part of the book is largely centered around the methodology of multiobjective systems optimization

The Future of the World Economy Wilhelm Krelle, 2013-03-09 Economic growth and structural change the future of the world economy is analysed in this book Conditional forecasts are given for the economic development of the most important world market countries till the year 2000 The driving forces of economic growth are identified and forecasted in connection with collaborating scholars in most of these countries and with international organizations This information is used in solving a coherent world model The model consists of linked growth models for each country or groups of countries The solutions show that the inequality in international income distribution will further increase and that the CMEA and OECD countries will approximately keep their relative positions with some changes within these groups Structural change is also analysed Additionally separate forecasts prepared by each collaborating country group are given and may be compared with the forecasts by the world model The book closes with chapters on special features of the future economic development on the international debt problem on long waves on structural change in the world trade on the emergence of service economics and on the comparison of GDP and NMP national accounting

Social System Accounts Karl A. Fox, 2012-12-06 Non Invasive Imaging of Atherosclerosis is a primer reference and review of some of the key features of current activities in the field of atherosclerosis The Editors goal is to provide material and stimulating ideas to basic scientists and clinical researchers in order to extend the application of vascular imaging and to further develop methods suitable for investigation of the arterial wall The first section presents current knowledge about pathology vascular mechanics and compensatory mechanisms active during atherogenesis It explores the early lesion complications of plaques and early detection of plaques Section II reviews several key methodological issues of B mode ultrasound imaging and some of the most current data Quantitative B mode ultrasound is an established non invasive tool widely used in large epidemiologic studies and interventional clinical trials of atherosclerosis The last section addresses the most promising areas of development in vascular imaging This involves new techniques to evaluate the atherosclerotic bed to follow atheroma progression regression and to evaluate vascular mechanics in atherosclerotic arteries The last chapter places the application of non invasive imaging in perspective

Theory and Decision G. Eberlein, H.A. Berghel, 2012-12-06 This collection of articles contains contributions from a few of Werner Leinfellner s many friends and colleagues Some of them are former

students of Werner's Others were colleagues of his at various American and European universities Further some have come to know Werner through his research his long standing editorship of *Theory and Decision* and his extensive participation in international conferences and congresses The following articles are new to this volume The areas covered are those in which Werner continues to play an active professional role We offer them as a tribute to the many and multi faceted contributions to the scientific enterprise for which Werner Leinfellner is so widely known We believe such a festschrift to be fitting and long overdue Because of the breadth of Werner's professional associations it was difficult to select representatives from among his many spheres of influence We apologize to the many scholars who could not be included because of time and space considerations Finally we wish to express appreciation to Dean John Guilds of the University of Arkansas for providing financial support early on in the evolution of this project to Jennifer Bauman for her bravura performance in copy editing the manuscripts and to our publisher at Reidel for bringing this volume to press

Recent Developments in the Foundations of Utility and Risk Theory L. Daboni, Aldo M. Montesano, M. Lines, 2012-12-06 The Second International Conference on Foundations of Utility and Risk Theory was held in Venice June 1984 This volume presents some of the papers delivered at FUR 84 The First International Conference FUR 82 was held in Oslo and some of the papers presented on that occasion were published by Reidel in the volume *Foundations of Utility and Risk Theory with Applications* edited by Bernt P Stigum and Fred Wenst p The theory of choice under uncertainty involves a vast range of controversial issues in many fields like economics philosophy psychology mathematics and statistics The idea of discussing these problems in international conferences has been successful two conferences have been held and others will follow The climate of the debate has changed in the meantime partly as a result of these conferences It is no more only a question of attacking or defending the neo Bernoullian assumptions but also of proposing wider generalizations and including new elements in the analysis of the decision process For instance Amartya Sen comparing the two current notions of rationality internal consistency and self interest pursuit introduces the concept of reasoning and considers the irrationality which may result from the failure of a positive correspondence between reasoning and choice or from a limited capacity of reasoning Rationality is also considered with respect to the controversial axiom of strong independence John C Harsanyi introduces the concept of practical certainty i e

Social System Accounts K. Fox, 2012-12-06 This book results from a research program on which I have spent most of my time since 1974 It addresses two of the major problems facing social system accounting how to measure and account for nonmarket activities and how to combine social and economic indicators The solution I propose is accounts based on behavior settings a concept originated by Roger G Barker more than thirty years ago Behavior settings are the natural units of social activity into which people sort themselves to get on with the business of daily life grocery stores school classes religious services meetings athletic events and so on The descriptive power of behavior settings has been established in surveys of complete communities in the United States and England of high schools ranging in size from fewer than 100 to more than

2000 students of rehabilitation centers in hospitals and of several other types of organizations Behavior settings are empirical facts of everyday life A description of a community or an organization in terms of behavior settings corresponds to common experience In many cases small establishments are behavior settings the paid roles in behavior settings are occupations and the buildings and equipment of establishments are the buildings and equipment of behavior settings Social Action Gottfried Seebaß, R. Tuomela, 2012-12-06 The papers contained in this volume are based on the contributions to an international interdisciplinary Symposium entitled Analytical and Sociological Action Theories which took place in Berlin West on September 13 1982 Each part comprises a main paper followed by two in Part IV three papers commenting on it On the whole there is an equal division into philosophical and sociological papers In particular each main paper receives both inter and interdisciplinary comments The Berlin Symposium was supported by the Deutsche Forschungsgemeinschaft Bonn and to a smaller extent by the Freie Universität Berlin both grants are acknowledged gratefully Berlin and Helsinki May 1984 GOTTFRIED SEEBASS RAIMO TUOMELA vii GOTTFRIED SEEBASS INTRODUCTION I It is a striking fact that the extended efforts of both sociologists and analytical philosophers to work out what is termed a theory of action have taken little if any account of each other Yet of the various reasons for this that come to mind none appears to be such as to foil any hopes for fruitful interdisciplinary exchange Being concerned apparently with the same set of phenomena viz individual and social actions the two theories can reasonably be expected to be partially overlapping as well as competitive and complementary Accordingly each can eventually be shown by the other to need completion or revision Whether or to what extent this is the case is subject to inquiry and discussion **Spatial Statistics and Models** G.L. Gaile, C. Willmott, 2013-11-27 The quantitative revolution in geography has passed The spirited debates of the past decades have in one sense been resolved by the inclusion of quantitative techniques into the typical geographer's set of methodological tools A new decade is upon us Throughout the quantitative revolution geographers ransacked related disciplines and mathematics in order to find tools which might be applicable to problems of a spatial nature The early success of Berry and Marble's Spatial Analysis and Garrison and Marble's volumes on Quantitative Geography is testimony to their accomplished search New developments often depend heavily on borrowed ideas It is only after these developments have been established that the necessary groundwork for true innovation obtains In the last decade geographers significantly augmented their methodological base by developing quantitative techniques which are specifically directed towards analysis of explicitly spatial problems It should be pointed out however that the explicit incorporation of space into quantitative techniques has not been the sole domain of geographers Mathematicians geologists meteorologists economists and regional scientists have shared the geographer's interest in the spatial component of their analytical tools Macroeconometric Models Władysław Welfe, 2013-02-15 This book gives a comprehensive description of macroeconometric modeling and its development over time The first part depicts the history of macroeconometric model building starting with Jan Tinbergen's and Lawrence R Klein's

contributions It is unique in summarizing the development and specific structure of macroeconometric models built in North America Europe and various other parts of the world The work thus offers an extensive source for researchers in the field The second part of the book covers the systematic characteristics of macroeconometric models It includes the household and enterprise sectors disequilibria financial flows and money market sectors

Decision Making and Programming V. V. Kolbin, 2003 The problem of selection of alternatives or the problem of decision making in the modern world has become the most important class of problems constantly faced by business people researchers doctors and engineers The fields that are almost entirely focused on conflicts where applied mathematics is successfully used are law military science many branches of economics sociology political science and psychology There are good grounds to believe that medicine and some branches of biology and ethics can also be included in this list Modern applied mathematics can produce solutions to many tens of classes of conflicts differing by the composition and structure of the participants specific features of the set of their objectives or interests and various characteristics of the set of their actions strategies behaviors controls and decisions as applied to various principles of selection or notions of decision optimization The current issues of social and economic systems involve the necessity to coordinate and jointly optimize various lines of development and activities of modern society For this reason the decision problems arising in investigation of such systems are versatile which shows up not only in the multiplicity of participants their interests and complexity of reciprocal effects but also in the laborious development of social utility criteria for a variety of indices and versatile objectives The efficient decision methods for such complex systems can be developed only the basis of specially developed mathematical tools
