

CANNABINOID BENEFITS

CANNABINOIDS ARE THE NATURALLY OCCURRING CHEMICAL COMPOUNDS FOUND IN THE CANNABIS PLANT. CANNABINOIDS ARE PARTLY RESPONSIBLE FOR THE WIDE ARRAY OF MEDICINAL AND PSYCHOACTIVE EFFECTS.

NON - PSYCHOACTIVE

Cannabidiol
CBD

The chemical structure of Cannabidiol (CBD) is shown. It consists of a central benzene ring with a hydroxyl group (-OH) at the 1-position. At the 3-position, there is a propyl chain. At the 4-position, there is a side chain consisting of a phenyl ring substituted with a methyl group at the 3-position and a pentyl group at the 4-position.

Relieves anxiety, convulsions, depression, inflammation and raises sedative, sleep aid and muscle relaxant

Cannabidiolic acid
CBDA

The chemical structure of Cannabidiolic acid (CBDA) is shown. It features a central pyran ring substituted with a hydroxyl group (OH) and a carboxylic acid group (COOH). This central ring is connected to a phenyl ring on the left and a pentyl chain on the right. The phenyl ring has a methyl group and a hydroxyl group. The pentyl chain is branched at the end.

PSYCHOACTIVE

Tetrahydrocannabinol
THC

The chemical structure of Tetrahydrocannabinol (THC) is shown. It consists of a tricyclic core: a benzene ring fused to a pyran ring, which is further fused to a cyclohexene ring. A hydroxyl group (-OH) is attached to the benzene ring. A pentyl side chain is attached to the pyran ring. The cyclohexene ring has two methyl groups at the 1 and 6 positions.

Psychotropic, parasite, anti-inflammatory, and microbial

Cannabinol
CBG

The chemical structure of Cannabinol (CBG) is shown. It features a naphthalene-like core with a hydroxyl group (-OH) at the 1-position and a long, branched alkyl side chain at the 2-position. The side chain includes a double bond and a methyl branch.

Paralyses, muscle relaxant, anti-emetic, analgesic, digestive aid, stomachic (stomach function)

Canabigeronic acid
CBGA

The chemical structure of Canabigeronic acid (CBGA) is shown. It features a central naphthalene ring system. At position 1, there is a hydroxyl group (-OH). At position 2, there is a carboxylic acid group (-COOH). At position 3, there is a side chain consisting of a propyl group attached to a carbon that is also bonded to a hydroxyl group (-OH) and a methyl group (-CH₃). At position 4, there is a side chain consisting of a propyl group attached to a carbon that is also bonded to a methyl group (-CH₃).

Marijuana As Medicine? Institute of Medicine, Janet Joy, Alison Mack, 2000-12-30 Some people suffer from chronic debilitating disorders for which no conventional treatment brings relief Can marijuana ease their symptoms Would it be breaking the law to turn to marijuana as a medication There are few sources of objective scientifically sound advice for people in this situation Most books about marijuana and medicine attempt to promote the views of advocates or opponents To fill the gap between these extremes authors Alison Mack and

Janet Joy have extracted critical findings from a recent Institute of Medicine study on this important issue interpreting them for a general audience Marijuana As Medicine provides patients as well as the people who care for them with a foundation for making decisions about their own health care This empowering volume examines several key points including Whether marijuana can relieve a variety of symptoms including pain muscle spasticity nausea and appetite loss The dangers of smoking marijuana as well as the effects of its active chemical components on the immune system and on psychological health The potential use of marijuana based medications on symptoms of AIDS cancer multiple sclerosis and several other specific disorders in comparison with existing treatments Marijuana As Medicine introduces readers to the active compounds in marijuana These include the principal ingredient in Marinol a legal medication The authors also discuss the prospects for developing other drugs derived from marijuana s active ingredients In addition to providing an up to date review of the science behind the medical marijuana debate Mack and Joy also answer common questions about the legal status of marijuana explaining the conflict between state and federal law regarding its medical use Intended primarily as an aid to patients and caregivers this book objectively presents critical information so that it can be used to make responsible health care decisions Marijuana As Medicine will also be a valuable resource for policymakers health care providers patient counselors medical faculty and students in short anyone who wants to learn more about this important issue

The Health Effects of Cannabis and Cannabinoids National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on the Health Effects of Marijuana: An Evidence Review and Research Agenda, 2017-05-01 Significant changes have taken place in the policy landscape surrounding cannabis legalization production and use During the past 20 years 25 states and the District of Columbia have legalized cannabis and or cannabidiol a component of cannabis for medical conditions or retail sales at the state level and 4 states have legalized both the medical and recreational use of cannabis These landmark changes in policy have impacted cannabis use patterns and perceived levels of risk However despite this changing landscape evidence regarding the short and long term health effects of cannabis use remains elusive While a myriad of studies have examined cannabis use in all its various forms often these research conclusions are not appropriately synthesized translated for or communicated to policy makers health care providers state health officials or other stakeholders who have been charged with influencing and enacting policies procedures and laws related to cannabis use Unlike other controlled substances such as alcohol or tobacco no accepted standards for safe use or appropriate dose are available to help guide individuals as they make choices regarding the issues of if when where and how to use cannabis safely and in regard to therapeutic uses effectively Shifting public sentiment conflicting and impeded scientific research and legislative battles have fueled the debate about what if any harms or benefits can be attributed to the use of cannabis or its derivatives and this lack of aggregated knowledge has broad public health implications The Health Effects of Cannabis and Cannabinoids provides a comprehensive review of scientific evidence related

to the health effects and potential therapeutic benefits of cannabis This report provides a research agenda outlining gaps in current knowledge and opportunities for providing additional insight into these issues that summarizes and prioritizes pressing research needs *Therapeutic Uses of Cannabis* British Medical Association,2020-08-17 At the last Annual Representative Meeting of the British Medical Association a motion was passed that certain additional cannabinoids should be legalized for wider medicinal use This report supports this landmark statement by reviewing the scientific evidence for the therapeutic use of cannabinoids and sets the agenda for change It will be welcomed by those who believe that cannabinoids can be used in medical treatment The report discusses in a clear and readable form the use and adverse effects of the drug for nausea multiple sclerosis pain epilepsy glaucoma and asthma *Medicinal Cannabis: Evolution of Therapeutic Use, Future Approaches and Other Implications, Volume II* Paola Brusa,Francesca Baratta,Shimon Ben-Shabat,Massimo Collino,2023-12-04 This Research Topic is the second volume of its kind Please see the publications of the first collection here Cannabis has been used in even the oldest traditional medicines available In the last century somewhat negative attention has prevailed when it comes to the psychotropic and addictive effects and abuse potential for this reason Cannabis has been banned and is illegal in many countries In recent years however there has been a more in depth evaluation of the legalization of cannabinoids for medical use in several countries following heightened media attention and reports of effectiveness although not always thoroughly backed up by scientific evidence In fact up to now the results from studies discussing the efficacy of the medical use of Cannabis are sometimes contradictory and not always conclusive Some factors fueling this inconclusiveness include the heterogeneous nature of the studied populations different Cannabis preparations and dosages studies with uncontrolled settings and different routes of administration Moreover these uncertainties are partly derived from legislative restrictions which over time have severely limited the conduction of rigorous controlled and comparable studies The official introduction of pharmaceutical grade Cannabis inflorescences for medicinal purposes has allowed physicians and pharmacists respectively to legally prescribe and prepare several Cannabis preparations Such products are currently being administered to patients without their efficacy being evaluated in controlled studies for each patient the composition and route of administration may be different In addition many advanced administration systems have been developed or are still under development but few clinical trials have been completed This second volume welcomes submissions of Original Research and Review articles building on and focusing on the in depth analysis of the legal technological and pharmacological aspects related to the medical use of chemically characterized Cannabis based formulations Studies carried out in the past or still in progress will also be considered to assess what evolution there has been in using Cannabis to treat diseases or conditions We invite submissions dealing with the following themes including but not limited to Cannabis based formulations current and future applications in therapy Legal technological and pharmacological aspects related to the medical use of Cannabis Non clinical evidence supporting therapeutic applications of

Cannabis including in vivo in invitro and in silico studies Important note for Authors Only studies dealing with highly purified chemically characterized Cannabis containing formulations where the chemical structure and purity must be precisely described by appropriate analytical methods will be considered for review in Experimental Pharmacology and Drug Discovery The following studies can be accepted for review in Ethnopharmacology if the extract is characterised in sufficient detail as is needed for a licensed medicine see here I Clinical Trial articles will be accepted for review only in the case that they are randomized double blinded and placebo controlled II Any studies relating to advanced formulations or galenic preparations to better evaluate the potential effects of their application in future therapies **Cannabis Betty**
