Nuclear, Particle and Many Body Physics Philip M. Morse, Bernard T. Feld, Herman Feshbach, 2013-10-22 Nuclear Particle and Many Body Physics Volume II is the second of two volumes dedicated to the memory of physicist Amos de Shalit. The contributions in this volume are a testament to the respect he earned as a physicist and of the warm and rich affection he commanded as a personal friend. The book contains 41 chapters and begins with a study on the renormalization of rational Lagrangians. Separate chapters cover the scattering of high energy protons by light nuclei, approximation of the dynamics of proton-neutron systems, the scattering amplitude for the Gaussian potential, Coulomb excitation of decaying states, and the optical potential for pions propagating in nuclear matter. Subsequent chapters deal with topics such as the elastic scattering of protons from analog resonances, internal Compton scattering in a muonic atom with an excited nucleus, and a formal theory of finite nuclear systems. The book also includes a eulogy and recollections of Amos de Shalit. **ERDA Energy Research Abstracts** ,1977 **Research in Progress** ,1968 *Nuclear Science Abstracts of Japan* ,1969
