A good quality reference for morphology with color photography is recommended, especially in the areas of hematology, urinalysis, and cytology; the latter is an area slightly overlooked in this book. The references reflect the compilation of several more detailed and more expensive texts into an affordable reference text.

In the current era of competition, agricultural products are also subjected to severe competition in the world markets. Poisonous plants in pastures, and careless use and handling of highly toxic chemicals result in tremendous losses in productivity and cost producers a great deal of money. Accordingly, emphasis on good farm management practices is becoming self-evident, and producers are seeking information and assistance from veterinarians in an effort to minimize livestock losses by poisonous plants. In this book, the information on poisonous plants is updated, which is useful for scientists in that it creates curiosity and enthusiasm for research in active principles of poisonous plants. It is also a good source of information for veterinarians who deal with the problems of herd management.

Agriculture is becoming complex and requires input from specialists in chemistry of soils and plants, veterinarians, plant biochemists, biologists, and engineers. Previously, these scientists presented their research findings in their own association's proceedings, and there was minimal exchange of ideas at the personal level. In 1977, the United States and Australia organized a symposium where scientists from different disciplines met and discussed different aspects of poisonous plants. A second symposium was held in 1984, when scientists from other major industrialized countries participated and created a lot of interest in this branch of science. This book contains proceedings for the third International symposium involving scientists from all countries of the world.

The opening chapter includes articles which provide estimates of economic losses due to death of livestock, reduced reproduction rate (reproduction efficiency, calving interval), reduced growth rates and weight losses in animals grazing on pastures infested with poisonous plants, replacement rate, and other associated costs, i.e., fencing, herding away from pastures contaminated with poisonous plants. The next section contains papers describing the variation in the response of animal species to plant poisons, ways by which herbivores protect themselves from poisonous plants, i.e., taste, smell, postingestive consequences (affective), and differentiating food on preingestive experiences (cognitive). A chapter describing different techniques of pasture management to maintain them relatively free from poisonous plants is included.

The next section contains articles that describe poisonous plants in the world. The poisonous plants from Australia, New Zealand, and Brazil are classified

for both the undergraduate veterinary technology student and the technician or technologist involved in clinical pathology in practice.

according to their effects on organ systems, as well as active principle, and from Europe (Meadow saffron, Solanaceae-solanum tuberosum sprout (potato tubers), Foxglove containing digitalis which improves cardiac function at low level but causes arrest at high level; Ranunculus acris (buttercup) which causes pasture dermatitis from contact with plant juice; Brassica (mustard oil from black and white mustard containing isothiocyanates, progoitrin, sinigrin); Hypericum (St. John's wort containing hypericin causing primary phototoxicity); Daphne (red berries containing daphnetoxin); Taxus baccata (yew tree containing Taxusin, Taxin, Taxol), and Quercus robur (oak tree leaves containing tannin) are also included in this section. Some unique features of plants from southeast Asia are also described.

The poisonous plants in North America such as the toxic algae, fungi, vascular plants (fern, horsetails, cycads, ginkgo, conifers, flowering plants), edible poisonous legumes (alfalfa, sweet clover), Astragalus and oxytropes, Compositae (flowering plants containing pyrrolizidine alkaloids i.e. Senecio, Boraginaceae (cynoglossum) and Leguminosae (crotonalaria) species; sesquiterpene lactones in Hymenoxys odorata; Centaurea (noxious weed causes chewing disease in horses), and broom snakeweed, are described. Pinus ponderosa needles causing abortion in cows; primary, and secondary photosensitizing plants causing hepatotoxicity, are also included. Ranunculaceae, a buttercup family-larkspurs containing diterpenoid alkaloids; Chenopodiaceae (halogeton, greasewood) containing oxalate and causing hypocalcemia, and uremia due to kidney damage, and death due to interference with energy metabolism. Oak leaved (Fagaceae) containing tannic acid which causes poisoning in cattle and horse are also described.

Another section of this book deals with the analysis of toxic principles from plants, studies on general plants, rumen bacteria, mycotoxins and immunology. In the next section, toxins from specific plants, and mechanisms of intoxication are described. The last section includes abstracts of different poster presentations on varied plants related topics. The list of participants is compiled at the end of book, followed by a very brief index to different plants.

This book is intended for use by plant specialists, toxicologists, graduate students, and advanced trainees in plant toxins. It is of little use for undergraduate students in veterinary medicine and is not suitable for use by the producers in their management of pastures and livestock.
