

The Polar Regions

The polar regions are the areas around both the North Pole, also known as the Arctic, and the South Pole, also known as Antarctica.

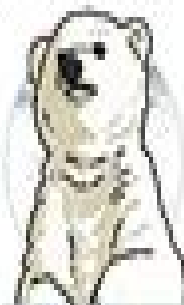

The Arctic

Location

The Arctic is located in the northernmost part of Earth and lies within the Arctic Circle (a line of latitude near the top of the Earth).

Landscape

The Arctic is largely covered by water, the Arctic Ocean, and most of this is frozen. These frozen areas are known as sea ice. Usually, a thick blanket of snow covers the sea ice.

Climate

- The Arctic is persistently cold with temperatures often as low as -34°C (-30°F).
- In winter, it is continuously dark often with clear skies.
- In summer, there is continuous daylight and cloudy near the coasts.

Wildlife

Animals in the Arctic have adapted to survive its harsh weather conditions. These include:

- musk oxen
- polar bears
- Arctic foxes

Antarctica

Location

Antarctica is a continent and is located in the southernmost part of the Earth within the Antarctic Circle. Its name means 'opposite to the Arctic'. It is surrounded by the Southern Ocean.

Landscape

Antarctica is around 14.2 million square kilometres (5.5 million square miles) in size. Around 98% of the land is covered in thick ice.

Climate

- Antarctica is the coldest, windiest, and driest continent on Earth.
- It experiences extreme low temperatures.
- Like the Arctic, Antarctica experiences continuous darkness in winter and continuous daylight in summer.

Wildlife

Many species of penguin live in Antarctica including the emperor penguin. Other animals living there include:

- orcas
- leopard and elephant seals

philosophical up to modern period The First edition of this book published in 2008 was an attempt towards compilation of relevant study material on evolution of Geographic thought in a systematic way up to the modern period The book has been revised with the addition of two elaborated sections i e one each on the Classical and the Contemporary tradition in geography However the major thrust of present book is on the nature of geographic developments in its contemporary phase More recently the anthropocentrism and a concern about methodology are more evident in the development of discipline

The Arctic Klaus Dodds, Mark Nuttall, 2019 Conversations defining the Arctic region often provoke debate and controversy for scientists this lies in the imprecise and imaginary line known as the Arctic Circle for countries like Canada Russia the United States and Denmark such discussions are based in competition for land and resources for indigenous communities those discussions are also rooted in issues of rights These shifting lines are only made murkier by the threat of global climate change In the Arctic Ocean the consequences of Earth's warming trend are most immediately observable in the multi year and perennial ice that has begun to melt which threatens ice dependent microorganisms and eventually will disrupt all of Arctic life and raise sea levels globally In *The Arctic What Everyone Needs to Know* Klaus Dodds and Mark Nuttall offer concise answers to the myriad questions that arise when looking at the circumpolar North They focus on its peoples politics environment resource development and conservation to provide critical information about how changes there can and will affect our entire globe and all of its inhabitants Dodds and Nuttall explore how the Arctic's importance has grown over time the region's role during the Cold War indigenous communities and their history and the past and future of the Arctic's governance among other crucial topics
