Radar Signal Processing And Its Applications:

Radar Signal Processing and Its Applications Jian Li, Robert Hummel, Petre Stoica, Edmund G. Zelnio, 2013-01-25
Radar Signal Processing and Its Applications brings together in one place important contributions and up to date research results in this fast moving area In twelve selected chapters it describes the latest advances in architectures design methods and applications of radar signal processing The contributors to this work were selected from the leading researchers and practitioners in the field This work originally published as Volume 14 Numbers 1 3 of the journal Multidimensional Systems and Signal Processing will be valuable to anyone working or researching in the field of radar signal processing It serves as an excellent reference providing insight into some of the most challenging issues being examined today Special Issue: Radar Signal Processing and Its Applications Jian Li, MTNS, 2003 Digital Signal Processing Techniques and Applications in Radar Image Processing Bu-Chin Wang, 2008-08-20 A self contained approach to DSP techniques and applications in radar imaging The processing of radar images in general consists of three major fields Digital Signal Processing DSP antenna and radar operation and algorithms used to process the radar images This book brings together material from these different areas to allow readers to gain a thorough understanding of how radar images are processed The book is divided into three main parts and covers DSP principles and signal characteristics in both analog and digital domains advanced signal sampling and interpolation techniques Antenna theory Maxwell equation radiation field from dipole and linear phased array radar fundamentals radar modulation and target detection techniques continuous wave pulsed Linear Frequency Modulation and stepped Frequency Modulation Properties of radar images algorithms used for radar image processing simulation examples and results of satellite image files processed by Range Doppler and Stolt interpolation algorithms The book fully utilizes the computing and graphical capability of MATLAB to display the signals at various processing stages in 3D and or cross sectional views Additionally the text is complemented with flowcharts and system block diagrams to aid in readers comprehension Digital Signal Processing Techniques and Applications in Radar Image Processing serves as an ideal textbook for graduate students and practicing engineers who wish to gain firsthand experience in applying DSP principles and technologies to radar imaging *Applications in Time-Frequency Signal Processing* Antonia Papandreou-Suppappola, 2018-10-03 Because most real world signals including speech sonar communication and biological signals are non stationary traditional signal analysis tools such as Fourier transforms are of limited use because they do not provide easily accessible information about the localization of a given frequency component A more suitable approach for those studying non stationary signals is the use of time frequency representations that are functions of both time and frequency Applications in Time Frequency Signal Processing investigates the use of various time frequency representations such as the Wigner distribution and the spectrogram in diverse application areas Other books tend to focus on theoretical development This book differs by highlighting particular applications of time frequency representations and demonstrating

how to use them It also provides pseudo code of the computational algorithms for these representations so that you can apply them to your own specific problems Written by leaders in the field this book offers the opportunity to learn from experts Time Frequency Representation TFR algorithms are simplified enabling you to understand the complex theories behind TFRs and easily implement them The numerous examples and figures review of concepts and extensive references allow for easy learning and application of the various time frequency representations
