Radio Occultations Using Earth Satellites A Wave Theory Treatment:

Radio Occultations Using Earth Satellites William G. Melbourne, 2005 the wave theory foundations of today's radio occultation techniques Forty years ago the premier radio occultation problem was how to profile the atmosphere and radius of Mars using signals sent by the Mariner 4 spacecraft Researchers then could rely on ray theory based techniques for accurate analysis of the thin uniform Martian atmosphere Today's radio occultation challenges mostly involve communications platforms and related data instrument systems and applications in the Earth's own atmosphere To deal with the density and complexity of this multilayered medium an analytical framework that goes beyond ray theory is needed Setting the cutting edge for the field *Radio Occultations Using Earth Satellites A Wave Theory Treatment* develops a purely wave theoretic approach to occultation analysis This approach yields more nuanced results than either ray or hybrid ray wave methodologies offer and proves suitable for the many variables at work in today's problems This groundbreaking text provides An introduction to the general theory of radio occultations Development of ray theory and scalar diffraction treatments of radio propagation processes Development of a wave theoretic treatment of the above wave propagation processes The correspondence between wave and ray theories A discussion of how to use a wave theoretic approach to infer the refractive properties of the propagation medium from a time series set of observations of the propagated wave's phase and amplitude A comprehensive resource that clearly defines the latest topics and methodologies *Radio Occultations Using Earth Satellites* is a must have text for engineers scientists students and managers in satellites communications navigation deep space and planetary exploration aerospace atmospheric science physics and engineering The Deep Space Communications and Navigation Series is authored by scientists and engineers with extensive experience in astronautics communications and related fields It lays the foundation for innovation in the areas of deep space navigation and communications by disseminating state of the art knowledge in key technologies *Radio Occultation Method for Remote Sensing of the Atmosphere and Ionosphere* Yuei-An Liou, 2010-02-01 The book is devoted to radio occultation RO remote sensing of the earth's atmosphere and ionosphere as a global method of monitoring This technique used the radio links satellite to satellite when a satellite receiver setting or rising behind the earth's atmosphere is relative to a satellite emitter of radio waves During setting the radio ray perigee moves through the ionosphere and ionosphere Atmospheric and ionospheric effects arise in most cases owing to influence of a zone near the radio ray perigee and cause significant variations of the amplitude phase and frequency of the radio waves These variations enable determination of the altitude profiles of temperature pressure refractivity density humidity and turbulence in the atmosphere distribution of the electron density in the ionosphere and the wave phenomena at different altitudes with a global coverage The aim of this book consists of the systematic description of the different approaches results of investigation and perspectives of the RO remote sensing as a tool for investigations of the atmosphere and ionosphere **Digital Satellite Navigation and Geophysics** Ivan G.

Simon,2006-12-13 This book introduces the reader to the concept of an autonomous software defined radio SDR receiver Each distinct aspect of the design of the receiver is treated in a separate chapter written by one or more leading innovators in the field Chapters begin with a problem statement and then offer a full mathematical derivation of an appropriate solution a decision metric or loop structure as appropriate and performance results **Radio Science Techniques for Deep Space Exploration** Sami W. Asmar,2022-03-29 Explore the development and state of the art in deep space exploration using radio science techniques In Radio Science Techniques for Deep Space Exploration accomplished NASA JPL researcher and manager Sami Asmar delivers a multi disciplinary exploration of the science technology engineering mission operations and signal processing relevant to deep space radio science The book discusses basic principles before moving on to more advanced topics that include a wide variety of graphical illustrations and useful references to publications by experts in their respective fields Complete explanations of changes in the characteristics of electromagnetic waves and the instrumentation and technology used in scientific experiments are examined Radio Science Techniques for Deep Space Exploration offers answers to the question of how to explore the solar system with radio links and better understand the interior structures atmospheres rings and surfaces of other planets The author also includes Thorough introductions to radio science techniques and systems needed to investigate planetary atmospheres rings and surfaces Comprehensive explorations of planetary gravity and interior structures as well as relativistic and solar studies Practical discussions of instrumentation technologies and future directions in radio science techniques Perfect for students and professors of physics astronomy planetary science aerospace engineering and communications engineering Radio Science Techniques for Deep Space Exploration will also earn a place in the libraries of engineers and scientists in the aerospace industry *Spaceborne Antennas for Planetary Exploration* William A. Imbriale,2006-08-08 JPL spacecraft antennas from the first Explorer satellite in 1958 to current R D Spaceborne Antennas for Planetary Exploration covers the development of Jet Propulsion Laboratory JPL spacecraft antennas beginning with the first Explorer satellite in 1958 through current research and development activities aimed at future missions Readers follow the evolution of all the new designs and technological innovations that were developed to meet the growing demands of deep space exploration The book focuses on the radio frequency design and performance of antennas but covers environmental and mechanical considerations as well There is additionally a thorough treatment of all the analytical and measurement techniques used in design and performance assessment Each chapter is written by one or more leading experts in the field of antenna technology The presentation of the history and technology of spaceborne antennas is aided by several features Photographs and drawings of JPL spacecraft Illustrations to help readers visualize concepts and designs Tables highlighting and comparing the performance of the

antennas Bibliographies at the end of each chapter leading to a variety of primary and secondary source material This book complements Large Antennas of the Deep Space Network Wiley 2002 which surveys the ground antennas covered in support of spacecraft Together these two books completely cover all JPL antenna technology in keeping with the JPL Deep Space Communications and Navigation Series mission to capture and present the many innovations in deep space telecommunications over the past decades This book is a fascinating and informative read for all individuals working in or interested in deep space telecommunications
