Techniques of Water-resources Investigations of the United States Geological Survey, 1977

Chronology of Sea Water Boyd Ellertson Olson, 1967

This report is a summary of isotopic dating techniques applied to sea water Several of the naturally occurring isotopes have been investigated for use in determining the chronology of sea water Only one C14 has found widespread use for this purpose The mean time since equilibration of the deep and bottom water with the atmosphere is calculated from C14 measurements to be between about 1000 and 2000 years The corresponding apparent time beneath the surface layer is of the order of 500 years less with the youngest water in the Atlantic Ocean and the oldest in the Pacific Processes of equilibration and dissolution of carbon within the ocean must be understood better before such figures can be adequately interpreted Of the other natural isotopes tritium radium and to a limited extent silicon 32 have found application in the study of circulation and mixing processes in the ocean Radium shows particular promise for the study of diffusion rates near the bottom
