Infectious Diseases: Volume 1 Hongjun Li, 2015-08-28 This book provides a comprehensive overview of diagnostic imaging in infectious diseases It starts with a general review of infectious diseases including their classification characteristics and epidemiology In separate chapters the authors then introduce the radionuclide imaging of 50 kinds of infectious diseases Volume 1 covers 21 viral infections Volume 2 has 29 chapters discussing 24 bacterial infections and 5 parasitic infections Each disease is clearly illustrated using cases combined with high quality computed tomography CT and magnetic resonance imaging MRI The book provides a valuable reference source for radiologists and doctors working in the area of infectious diseases
[Radiology of Infectious and Inflammatory Diseases - Volume 1](#) Hongjun Li, Jian Wang, Xuening Zhang, 2023-04-12

This book provides a comprehensive overview of diagnostic imaging in infectious and inflammatory diseases in central nervous system and spine. It starts with basic theory of infectious diseases including pathological basis, laboratory diagnostic methods and clinical imaging techniques. In following chapters the authors firstly introduce the central nervous system infections related to respiratory, gastrointestinal and contagious diseases. Then viral, bacterial, fungal, parasitic and special infections in central nervous system and spine are presented with clinical cases. Each disease is clearly illustrated using cases combined with high quality CT and MRI. The book provides a valuable reference source for radiologists and doctors working in the area of infectious and inflammatory diseases. *Radiology of Infectious and Inflammatory Diseases - Volume 5*

Hongjun Li, Shinong Pan, Jun Zhou, 2022-08-26. This book offers a systematic coverage of diagnostic imaging in infectious and inflammatory diseases in musculoskeletal system. The first part is devoted to a general review of infectious diseases in musculoskeletal system as well as pathogenic classification, imaging techniques, pathogenic and imaging characteristics. In the following parts, imaging interpretation of typical infectious and inflammatory diseases affecting bone joint and soft tissue is described. Each disease is clearly illustrated using cases combined with high resolution CT, MRI and PET. The book provides a valuable reference source for radiologists and doctors working in the area of infectious and inflammatory diseases.

Diagnostic Imaging of Emerging Infectious Diseases Pu-Xuan Lu, Bo-Ping Zhou, 2015-11-26. This book introduces the diagnosis of Emerging Infectious Diseases (EIDs) including newly emerging infectious diseases and also infectious diseases that show resistance to present treatments. Radiographic examinations are of great value in EIDs diagnosis, differential diagnosis, treatment efficacy assessment and prognosis evaluation. This book covers severe acute respiratory syndrome (SARS), human avian influenza H5N1, H7N9, influenza A H1N1, hand foot mouth disease, acquired immune deficiency syndrome (AIDS), viral hepatitis, pulmonary tuberculosis. All seven of these EIDs are associated with high incidence and mortality. This book details the imaging techniques, radiological appearance and characteristics of EIDs and diagnosis and differential diagnosis of EID related complications. Considering the unique and in some cases only partially understood nature of EIDs, appropriate space is provided in this book for the detailed explanation of the etiology, epidemiology, pathophysiology, clinical symptoms and signs, laboratory tests, clinical diagnosis and differential diagnosis, prevention, treatment and prognosis of EIDs. As such, it will be a valuable resource for improving the prevention, diagnosis and treatment of EIDs. Editors Pu Xuan Lu and Bo Ping Zhou are professors at Shenzhen Third People's Hospital, Guangdong Medical College, China. **AIDS and Respiratory**

Medicine Margaret A. Johnson, Robert Miller, Alimuddin Zumla, 2013-11-11. In the 15 years of the acquired immunodeficiency syndrome (AIDS) pandemic, much has been learnt about its natural history and complications. It is clear that the lung is a major target organ both for the human immunodeficiency virus (HIV) and a wide array of infectious and non-infectious pulmonary complications. A great deal of information on the epidemiology, microbiology, immunology, clinical features, diagnosis and

management of these pulmonary complications has accumulated during the past 15 years. Given the enormous explosion in information, it is now timely to bring together this knowledge in this 25 chapter volume on AIDS and respiratory medicine. The contributors to this volume are prominent epidemiologists, doctors, microbiologists, and scientists from Europe, USA, and Africa. Professors Chretien and Enarson give a masterful account of the epidemiology of lung complications of HIV. Drs Zumla, Rowland Jones, and Professor McMichael give a detailed summary of the lung immune responses to HIV. They outline normal lung defenses and discuss the consequences of HIV infection on them. The pulmonary radiological features of HIV and its complications as seen in the USA and Europe are illustrated by Professors Armstrong and Dee, and this is compared and contrasted by Professor Tshibwabwa Tumba, who brings together his vast experience of chest X rays in AIDS patients from Central Africa. Drs O'Doherty and Miller deal with the uses and potential applications of nuclear medicine in imaging of the chest in AIDS patients.
