Sir John Soane? Influence on Architecture from 1791 Oliver Bradbury,2017-07-05 Sir John Soane s Influence on Architecture from 1791 A Continuing Legacy is the first in depth study of this eighteenth century British architect s impact on the work of others extending globally and still indeed the case over 200 years later Author Oliver Bradbury presents a compelling argument that the influence of Soane 1753 1837 has persevered through the centuries rather than waning around the time of his death Through examinations of internationally renowned architects from Benjamin Henry Latrobe to Philip Johnson as well as a number of not so well known Soanean disciples Bradbury posits that Soane is perhaps second only to Palladio in terms of the longevity of his influence on architecture through the course of more than two centuries from the early 1790s to today concluding with the recent return to pure revivalism Previous investigations have been limited to focusing on Soane s late Georgian and then post modern influence this is the first in depth study of his impact over the course of two centuries Through this survey Bradbury demonstrates that Soane s influence has been truly international in the pre modern era reaching throughout the British Isles and beyond to North America and even colonial Australia Through his inclusion of select detailed case studies Bradbury contends that Soane s is a continuing not negated legacy in architecture

Railway Architecture Bill Fawcett,2015-01-10 The great arched train sheds of Victorian Britain are often seen as the nineteenth century equivalent of medieval cathedrals once specific railway buildings became necessary around 1830 British architects seized the opportunity with both hands designing some of the great buildings of their age However these grand buildings are only part of the story not only was the country peppered with humbler individually styled station buildings but also with bridges signal boxes engine sheds and other structures specific to the railways In this illustrated introduction Bill Fawcett tells the story of railway architecture from the age of George Stephenson to modern times including such influential architects as Sir George Gilbert Scott and Charles Holden *"Iron, Ornament and Architecture in Victorian Britain "* Paul Dobraszczyk,2017-07-05 Vilified by leading architectural modernists and Victorian critics alike mass produced architectural ornament in iron has received little sustained study since the 1960s yet it proliferated in Britain in the half century after the

building of the Crystal Palace in 1851 a time when some architects engineers manufacturers and theorists believed that the fusion of iron and ornament would reconcile art and technology and create a new modern architectural language

Comprehensively illustrated and richly researched *Iron Ornament and Architecture in Victorian Britain* presents the most sustained study to date of the development of mechanised architectural ornament in iron in nineteenth century architecture its reception and theorisation by architects critics and engineers and the contexts in which it flourished including industrial buildings retail and seaside architecture railway stations buildings for export and exhibition and street furniture Appealing to architects conservationists historians and students of nineteenth century visual culture and the built environment this book offers new ways of understanding the notion of modernity in Victorian architecture by questioning and re evaluating both Victorian and modernist understandings of the ideological split between historicism and functionalism and ornament and structure
