U.S. Geological Survey Professional Paper, 1970 *Biological Systems in Mineral Exploration and Processing* R. R. Brooks, Colin E. Dunn, G. E. M. Hall, 1995 A steady increase in interest in biological systems in mineral exploration and processing has led to the need for a book bringing together the multi disciplinary aspects of the subject This book encompasses a number of fields in a single volume including Russian work on the use of barrier free

Geological Survey Professional Paper ,1977 Spatial Analytical Perspectives on GIS Manfred M Fischer,2019-03-13

The ability to manipulate spatial data in different forms and to extract additional meaning from them is at the heart of GIS yet genuine spatial analysis tools are rarely incorporated into commercial software thus seriously limiting their usefulness The future of GIS technology will depend largely on the incorporation of more powerful analytical and modelling functions and there is agreement within the GIS community of the urgent need to address these issues This text attempts this task It presents the latest information on incorporating spatial analysis tools into GIS and includes concepts and applications from both the environmental and socio economic sciences **Hyperspectral Data Processing** Chein-I Chang,2013-02-01

Hyperspectral Data Processing Algorithm Design and Analysis is a culmination of the research conducted in the Remote Sensing Signal and Image Processing Laboratory RSSIPL at the University of Maryland Baltimore County Specifically it treats hyperspectral image processing and hyperspectral signal processing as separate subjects in two different categories Most materials covered in this book can be used in conjunction with the author s first book Hyperspectral Imaging Techniques for Spectral Detection and Classification without much overlap Many results in this book are either new or have not been explored presented or published in the public domain These include various aspects of endmember extraction unsupervised linear spectral mixture analysis hyperspectral information compression hyperspectral signal coding and characterization as well as applications to conceal target detection multispectral imaging and magnetic resonance imaging Hyperspectral Data Processing contains eight major sections Part I provides fundamentals of hyperspectral data processing Part II offers various algorithm designs for endmember extraction Part III derives theory for supervised linear spectral mixture analysis Part IV designs unsupervised methods for hyperspectral image analysis Part V explores new concepts on hyperspectral information compression Parts VI VII develops techniques for hyperspectral signal coding and characterization Part VIII presents applications in multispectral imaging and magnetic resonance imaging Hyperspectral Data Processing compiles an algorithm compendium with MATLAB codes in an appendix to help readers implement many important algorithms developed in this book and write their own program codes without relying on software packages Hyperspectral Data Processing is a valuable reference for those who have been involved with hyperspectral imaging and its techniques as well those who are new to the subject *Geochemical Remote Sensing of the Sub-Surface* M. Hale,2000-04-13 This volume documents the techniques for geochemical remote sensing of the subsurface to present case history evidence of their successes and limitations and to consider their further potential The chapters in Part I focus on the mechanisms and models of dispersion that give rise to the patterns we attempt to detect Part II deals with the detection of dispersion patterns that owe their origins to processes such as leakage that are allied to resource emplacement Part III describes the detection of dispersion patterns that are generated by processes such as radiodecay and oxidation taking place in deposits after their

emplacement Every chapter brings a fresh perspective Radon has met with much success in uranium exploration whilst thorough research studies on helium and mercury lead to conclusions that tend to discourage use of these gases in mineral exploration The case for light hydrocarbons is one of compelling simplicity whilst elaborate mathematical and electrochemical models are advanced for metal migration
