2020 Gilbert Lewis distills a lifetime of insights he garnered as a medical anthropologist. He asks: How do different cultures' beliefs about illness influence patients' abilities to heal? Despite the advances of Western medicine, what can it learn from non-Western societies that consider sickness and curing to be as much a matter of social relationships as biological states? What problems arise when one set of therapeutic practices displaces another? Lewis compares Indigenous medical beliefs in New Guinea in 1968 when villagers were largely self-reliant and in 1983 after they became dependent on Western medicine. He then widens his comparative scope by turning to West Africa and discussing a therapeutic community run by a prophet who heals the ill through confession and long-term residential care. Pandora's Box began life with the prestigious Lewis Henry Morgan Lectures that Gilbert Lewis delivered in 1979 at the University of Rochester. He expanded them with materials gathered over the next forty years, completing the manuscript a few weeks before his death. Engagingly written, this book will inspire anthropologists, medical professionals, students, and curious readers to look with new eyes at current crises in world health.

American Indian Health Everett R. Rhoades, 2003-05-22 Disease processes among American Indians and Alaska Natives often have distinct manifestations that need to be considered by clinicians and health policy makers involved with these populations. Equally important, all aspects of Indian life, including health, are governed by the special relationship between Indian tribes and the U.S. federal government. For American Indian Health, Everett R. Rhoades has gathered a distinguished group of scholars and practitioners to present a comprehensive assessment of the health of American Indian peoples today and the delivery of health services to them.

Never Pure Steven Shapin, 2010-06-01 Steven Shapin argues that science, for all its immense authority and power, is and always has been a human endeavor, subject to human capacities and limits. Put simply, science has never been pure. To be human is to err, and we understand science better when we recognize it as the laborious achievement of fallible, imperfect, and historically situated human beings. Shapin's essays, collected here, include reflections on the historical relationships between science and common sense, between science and modernity, and between science and the moral order. They explore the relevance of physical and social settings in the making of scientific knowledge, the methods appropriate to understanding science historically, dietetics as a compelling site for historical inquiry, the identity of those who have made scientific knowledge, and the means by which science has acquired credibility and authority. This wide-ranging and intensely interdisciplinary collection, by one of the most distinguished historians and sociologists of science, represents some of the leading edges of change in the scholarly understanding of science over the past several decades.

Bioarchaeology Jane E. Buikstra, Lane A. Beck, 2017-03-02 The core subject matter of bioarchaeology is the lives of past peoples interpreted anthropologically. Human remains, contextualized archaeologically and historically, form the unit of study. Integrative and frequently interdisciplinary, bioarchaeology draws methods and theoretical perspectives from across the sciences and the humanities. *Bioarchaeology: The Contextual Study of Human Remains* focuses upon the contemporary practice of bioarchaeology in North American contexts, its accomplishments, and

challenges Appendixes a glossary and 150 page bibliography make the volume extremely useful for research and teaching

Medicine, Rationality and Experience Byron J. Good, 1994 Biomedicine is often thought to provide a scientific account

of the human body and of illness In this view non Western and folk medical systems are regarded as systems of belief and subtly discounted This is an impoverished perspective for understanding illness and healing across cultures one that neglects many facets of Western medical practice and obscures its kinship with healing in other traditions Drawing on his research in several American and Middle Eastern medical settings in this 1993 book Professor Good develops a critical anthropological account of medical knowledge and practice He shows how physicians and healers enter and inhabit distinctive worlds of meaning and experience He explores how stories or illness narratives are joined with bodily experience in shaping and responding to human suffering and argues that moral and aesthetic considerations are present in routine medical practice as in other forms of healing Books in Print ,1991 **Health Care in Eleventh-Century China** Nathan Sivin,2015-09-04 By examining all the prevalent varieties of therapy from self care to religious ritual this book explores health care practices in China before modern times In ancient China most people were unable to afford a doctor even in the unlikely case that one lived near their village and was willing to treat peasants What did they do when their children got sick The answer is to be found in this book which goes far beyond the history of medicine The author uses methods of medical anthropology to explain the curative roles of popular religion Daoism Buddhism and the therapeutic rites performed by imperial officials Readers will discover the steady interaction of religious healing and classical medicine in this culture This highly readable book builds on over forty years of study and analysis of early liturgical and medical writings and a wide variety of other sources Its focus on the eleventh century throws new light on a period of rapid transition in many aspects of therapy and it will appeal to scholars and general readers alike The Publishers' Trade List Annual ,1985 National Library of Medicine Current Catalog National Library of Medicine (U.S.),1971 First multi year cumulation covers six years 1965 70 **Assessing Contributions/h** M. Harvey Brenner,2019-04-10 The authors of this book provide a systematic integrated review and comparison of the contributions of sociology political science economics demography anthropology history of science and medicine psychiatry and psychology to a number of health related fields including epidemiology health services research and health policy studies The book reflects the authors attitude that multidisciplinary research efforts must be carried out in order to obtain a thorough understanding of the relationship of social science knowledge to health problems
