More Times And Things:

Predicting Presidential Elections and Other Things Ray C. Fair, 2002 What do the following events have in common In 2000 the election between George W Bush and Al Gore was a virtual tie The 1989 and 1990 vintages have turned out to be two of the best ever for Bordeaux wines In 2001 the Federal Reserve lowered the interest rate eleven times The decade of the 1970s was one of the worst on record for U S inflation In 2001 the author of this book at age 59 ran a marathon in 3 hours and 30 minutes but should have been able to do it in 3 hours and 15 minutes This book shows clearly and simply how these diverse events can be explained by using the tools of the social sciences and statistics It moves from a discussion of formulating theories about real world phenomena to lessons on how to analyze data test theories and make predictions Through the use of a rich array of examples the book demonstrates the power and range of social science and statistical methods In addition to big topics presidential elections Federal Reserve behavior and inflation and not quite so big topics wine quality the book takes on questions of more direct personal interest Who of your friends is most likely to have an extramarital affair How important is class attendance for academic performance in college How fast can you expect to run a race or perform some physical task at age 55 given your time at age 30 In other words how fast are you slowing down As the author works his way through an incredibly broad range of questions and topics demonstrating the usefulness of statistical theory and method he gives the reader a new way of thinking about many age old concerns in public and private life
