happened It details the evolution of information graphics the kinds of graphics at the core of data visualization maps diagrams charts scientific and medical images from prehistory to the present day It explains how the cultural context production and presentation technologies and data availability have shaped the history of data visualization It considers the perceptual and cognitive reasons why data visualization is so effective and explores the little known world of tactile graphics raised line drawings used by people who are blind The book also investigates the way visualization has shaped our modern world The European Renaissance and the Scientific Revolution relied on maps and technical and scientific drawings and graphics influence how we think about abstract concepts like time and social connection This book is written for data visualization researchers and professionals and anyone interested in data visualization and the way we use graphics to understand and think about the world

The West & the Map of the World Matthew Richardson, 2010 Inspired by antique maps and the mapmakers global vision this book presents the past as a single narrative in which European history is an offshoot of Asian history The author explains that the dominating ethos of the modern West owes more to hordes of Asian nomads who colonised Europe than to the classical civilisation of the Greeks and Romans
