## **People And Predators From Conflict To Coexistence:**

*People and Predators* Defenders of Wildlife, 2012-06-22 Carnivores provide innumerable ecological benefits and play a unique role in preserving and maintaining ecosystem services and function but at the same time they can create serious problems for human populations A key question for conservation biologists and wildlife managers is how to manage the world's carnivore populations to conserve this important natural resource while mitigating harmful impacts on humans In *People and Predators* leading scientists and researchers offer case studies of human carnivore conflicts in a variety of landscapes including rural urban and political The book covers a diverse range of taxa geographic regions and conflict scenarios with each chapter dealing with a specific facet of human carnivore interactions and offering practical concrete approaches to resolving the conflict under consideration Chapters provide background on particular problems and describe how challenges have been met or what research or tools are still needed to resolve the conflicts *People and Predators* will help readers to better understand issues of carnivore conservation in the 21st century and provides practical tools for resolving many of the problems that stand between us and a future in which carnivores fulfill their historic ecological roles

**People and Predators** Nina Fascione, Aimee Delach, Martin Edgar Smith, 2004 Human populations carnivores generally have a strained relationship which presents problems for conservationists This book looks at aspects of human carnivore interaction across a range of landscapes environments

**Ecological Vulnerability** Katie Woolaston, 2022-06-23 Humans are responsible for biodiversity loss in many related and sometimes conflicting ways Human wildlife conflict commonly defined as any negative interaction between people and wildlife is a primary contributor to wildlife extinction and a manifestation of the destructive relationship that people have with wildlife The author presents this wicked problem in a social and legal context and demonstrates that legal institutions structurally deny human wildlife conflict while exacerbating conflict promoting values consistent with individual autonomy and ignoring the interconnected vulnerabilities shared by human and non human species alike It is the use of international and state law that sheds light on existing conflicts including dingo conflict on K Gari Fraser Island in Australia elephant conflict in Northern Botswana and the global wildlife trade contributing to COVID 19 This book presents a critical analysis of human wildlife conflict and its governance to guide lawyers scientists and conservations alike in the transformation of the management of human wildlife conflict

**Human - Wildlife Conflicts in Europe** Reinhard A. Klenke, Irene Ring, Andreas Kranz, Niels Jepsen, Felix Rauschmayer, Klaus Henle, 2013-03-23 This book is about conflicts between different stakeholder groups triggered by protected species that compete with humans for natural resources It presents key ecological features of typical conflict species and mitigation strategies including technical mitigation policy instruments and the design of participatory decision strategies involving relevant stakeholders The book provides not only case studies from various European countries it also presents a framework for the development of biodiversity conflict reconciliation action plans that can be used globally

**Ecology and Conservation of the Maned Wolf** Adriana G.

Consorte-McCrea, Eliana Ferraz Santos, 2013-10-24 Wolves are controversial figures worldwide and much effort has focused on how to conserve them while addressing public concerns. With its solitary habits and fruit eating diet the endangered maned wolf roams the South American grasslands and swamps playing a vital part in maintaining biodiversity hotspots. Compared to the grey wolf little is known about its relationship with local people and the environment and the reasons for its decline making research about this unique species an urgent concern.

**Ecology and Conservation of the Maned Wolf** Multidisciplinary Perspectives gathers the work of leading researchers from diverse disciplines and countries covering up to date research on the biology ecology and conservation of the maned wolf. It presents innovative insights that can benefit conservation strategies and offers perspectives for the future of the species. The book is divided into three parts. Part I explains the general issues concerning the maned wolf population viability the relationship between maned wolves and people and the management of captive maned wolves. It also reviews current aspects of species biology including conservation genetics feeding ecology social structure and reproduction and conservation medicine. Part II contains case studies that present knowledge gathered from conservation programs and field research in all countries where the species is currently found: Brazil, Uruguay, Argentina, Bolivia and Paraguay. Part III offers perspectives from diverse fields of research exploring the challenges and opportunities connecting maned wolf conservation efforts with those of its habitat and of other endangered species. This includes education and communication tools the application of human dimensions research to maned wolf conservation ethnoconservation perspectives and the ecological and socioeconomic challenges to the conservation of the cerrado habitat.

**People and Predators** Defenders of Wildlife, 2004-10-06 Human populations carnivores generally have a strained relationship which presents problems for conservationists. This book looks at aspects of human carnivore interaction across a range of landscapes environments.

**Problematic Wildlife II** Francesco Maria Angelici, Lorenzo Rossi, 2020-05-07 In a world where habitats are constantly changing and the impact of anthropization on the environment is increasingly intense interactions between human and wildlife are becoming more and more complex. Some species pose problems for human activities while many others need to be helped in order to continue to exist. This book follows the first volume called *Problematic Wildlife* edited by F. M. Angelici and published by Springer in 2016 which has had considerable success with readers and critics. The volume includes 21 chapters divided into 7 parts devoted to specific topics which are approached in a multidisciplinary way. There are both review chapters and specific cases always bearing in mind the interest for an international audience. The book is useful both for scientists wildlife specialists conservationists zoologists ecologists university students nature managers and for those who live in contact with wildlife and its problems such as farmers shepherds hunters urban planners and staff of parks and nature reserves. Its ultimate goal is to offer scientific and pragmatic approaches to manage each category of problematic species.

**Serengeti IV** Anthony R. E. Sinclair, Kristine L. Metzger, Simon A. R. Mduma, John M. Fryxell, 2015-05-11 The vast savannas and great migrations of the Serengeti conjure

impressions of a harmonious and balanced ecosystem But in reality the history of the Serengeti is rife with battles between human and non human nature In the 1890s and several times since the cattle virus rinderpest at last vanquished in 2008 devastated both domesticated and wild ungulate populations as well as the lives of humans and other animals who depended on them In the 1920s tourists armed with the world s most expensive hunting gear filled the grasslands And in recent years violence in Tanzania has threatened one of the most successful long term ecological research centers in history Serengeti IV the latest installment in a long standing series on the region s ecology and biodiversity explores the role of our species as a source of both discord and balance in Serengeti ecosystem dynamics Through chapters charting the complexities of infectious disease transmission across populations agricultural expansion and the many challenges of managing this ecosystem today this book shows how the people and landscapes surrounding crucial protected areas like Serengeti National Park can and must contribute to Serengeti conservation In order to succeed conservation efforts must also focus on the welfare of indigenous peoples allowing them both to sustain their agricultural practices and to benefit from the natural resources provided by protected areas an undertaking that will require the strengthening of government and education systems and as such will present one of the greatest conservation challenges of the next century

**Cheetahs: Biology and Conservation** ,2017-11-28 Cheetahs Biology and Conservation reports on the science and conservation of the cheetah This volume demonstrates the interdisciplinary nature of research and conservation efforts to study and protect the cheetah The book begins with chapters on the evolution genetics physiology ecology and behavior of the species as well as distribution reports from range countries These introductory chapters lead into discussions of the challenges facing cheetah survival including habitat loss declining prey base human wildlife conflict illegal trade and newly emerging threats notably climate change This book also focuses on conservation strategies and solutions including environmental education and alternative livelihoods Chapters on the role of captive cheetahs to conservation and the long term research of the species are included as are a brief discussion of the methods and analyses used to study the cheetah The book concludes with the conservation status and future outlook of the species Cheetahs Biology and Conservation is a valuable resource for the regional and global communities of cheetah conservationists researchers and academics Although cheetah focussed the book provides information relevant to the study of broader topics such as wildlife conservation captive breeding habitat management conservation biology and animal behaviour Cover photograph by Angela Scott Includes chapters by the world s leading cheetah researchers and practitioners who have focused their efforts on this high profile species of conservation concern Provides findings as a combination of scientific detail and basic explanations so that they can be available not only to cheetah researchers and conservationists but also to policy makers business leaders zoo managers academics students and people interested in the cheetah and its future Presents the current knowledge of the species helping lay the foundations and best practices for cheetah conservation and research worldwide Additional protocols and forms which were provided by authors

Young, 2015-05-07 Conflicts over the conservation of biodiversity are increasing and are serious obstacles to wildlife conservation efforts worldwide Changing patterns in land use over exploitation pollution climate change and the threat posed by invasive species all challenge the way we currently maintain and protect biodiversity from the local management of single species to the international management of resources Integrating approaches from different academic disciplines policy makers and

practitioners this volume offers a radically new cross disciplinary multi scale approach to deal with conflicts Groundbreaking strategies for conservation are analysed and a large section of the book is devoted to exploring case studies of conflict from around the world Aimed primarily at academics researchers and students from disciplines relating to conservation ecology natural resources management and environmental governance this book will be equally valuable to conservation NGOs and practitioners and the policy community at national and international levels *People, Parks, and Power* Maria

Sapignoli,Robert K. Hitchcock,2023-11-08 This book presents a critical review of the ethics of conservation related resettlement We examine what has become known as the parks versus people debate also known as the new conservation debate which has pitted indigenous and other local people against nation states and social scientists against ecologists and conservationists for the past several decades Aiming to promote biodiversity conservation and habitat preservation some biologists park planners and conservation organizations have recommended that indigenous and other people should be removed from protected areas Local people for their part have argued that residents of the areas that were turned into protected areas national parks game reserves and monuments had managed them in productive ways for generations and that they should have the right to remain there and to use natural resources as long as they do so sustainably This position is often supported by indigenous rights organizations and social scientists especially anthropologists There are also some conservation oriented NGOs that have policies involving a more human rights oriented approach aimed at poverty alleviation sustainable development and social justice The book discusses biodiversity conservation indigenous peoples those who are ethnic minorities and who are often marginalized politically and protected areas those categories of land set aside by nation states that have various kinds of rules about land use and residence The focus initially is on case studies from protected areas in the United States including Yellowstone National Park Yosemite National Park and Glacier National Park and on national monuments and historical parks where resettlement took place We then consider issues of coercive conservation in southern Africa including Hwange National Park Zimbabwe the Central Kalahari Game Reserve Botswana Etosha National Park and Bwabwata National Park Namibia and Kgalagadi Transfrontier Park South Africa and Botswana All of these cases involved involuntary resettlement at the hands of the governments In the book we consider some of the social impacts of conservation forced resettlement CfR many of which tend to be negative After that we assess some of the strategies employed by indigenous peoples in their efforts to recover rights of access to protected areas and the cultural and natural resources that they contain Examples are drawn from cases in Asia Africa and South America Conclusions are provided regarding the ethics of conservation related resettlement and some of the best practices that could be followed particularly with regard to indigenous peoples **The Wolf** Ian Convery,Peter Davis,Erwin van van Maanen,Owen Nevin,Karen
