

People or Penguins: The Case for Optimal Pollution

William Baxter starts with the proposition that, when dealing with pollution or any other problem, it is very important to know what one is trying to accomplish. Agreeing on whether and on how to pursue a given objective is not possible without identifying and stating with precision a more general objective. Often people talk about of having clean water, clean air and preserving wilderness areas. But then, these objectives are not sufficient general objective. Each of them is view as a means and not really an end. For example, in the case of clean water, one needs to ask, "how clean?", "what does clean mean?" and "why have clean water?" Therefore, a more general community goal needs to be stated, a goal that is sufficient general enough in its scope. A goal that enjoy sufficient general assent among the members of the community in a way that questions such as "why" no longer looks to be admissible in relation to the stated goal. The stated goal should be beneficial to the human beings.

It is not easy for a society to subscribe to four or more general objectives. This is because each new general objective will conflict with the prior listed objective in certain applications. Therefore, each new objective serves as a limiting factor to the prior objectives or goals. Since there is no expectation of getting an unanimous consent to all the goals, Baxter set forth four criterions which can be used as in attempting to frame human organization problem solutions. The first criterion is the sphere of freedom. For instance, one needs to state a preposition that everyone is supposed to be free to chose to do whatever the person wishes to as long as the actions does not interfere with other people's interest. This proposition is unlikely to be with questions such as "why". This goal is so basic as it reflects a cultural value that is broadly shared in that the question "why" is seen as both imponderable and impertinent. The second criterion states that waste is a bad thing. Scarcity is the dominant characteristic of human existence. The available resources, skills and labor are scarce. They are not adequate to yield to everyone both tangible and intangible satisfactions. Therefore, these resources should never be wasted.

The third criterion states that every individual should be seen as an end rather than a means to be used in another's betterment. Every person needs to be afforded the same level of dignity and have an abso

Controversies Steven Scalet, John Arthur, 2019-06-18 Morality and Moral Controversies 10th Edition challenges students to critically assess today's leading moral, social, and political issues. As a comprehensive anthology, it provides students with the tools they need to understand the philosophical ideas that are currently shaping our world. The 10th edition includes classic and contemporary readings in moral theory, the most current topics in applied ethics, and updated debates in social and political philosophy. As in the previous nine editions, the materials were selected for balance, timeliness, and accessibility after reviewing a vast range of possible articles from leading scholarly journals, mainstream periodicals, online posts, and book chapters. Hallmarks include carefully edited and philosophically relevant U.S. Supreme Court decisions, compelling readings, and contrasting points of view that reflect a broad ethical and political spectrum. Upon completing this book, readers will be able to understand philosophical ideas that are shaping the world today, apply various philosophical ideas to politics, religion, ethics, economics, personal relationships, medicine, the environment, and climate change, warfare, and other areas, appreciate how to construct, apply, and evaluate basic philosophical arguments. Key updates to the 10th edition include all material published in the actual book, in contrast to placing sections online behind a paywall as was the case in earlier editions, with a different publisher. New readings on autonomous warfare, self-driving cars, the right to health care, technology, and privacy, the value of democracy, racial equality, immigration.

Bibliography of Law and Economics B. Bouckaert, G. de Geest, 2013-04-18 Law and economics can be considered as the most exciting development in legal scholarship in recent decades. This volume is the first all-encompassing bibliography in this area. It lists approximately 7000 publications covering the whole area of law and economics, including old law and economics topics such as antitrust law, labor law, tax law, social security, economic regulation, etc., as well as new law and economics with such topics as tort law, contract law, family law, procedure, criminal law, etc. The volume also includes the literature on the philosophical foundations and the fundamental concepts of the approach. Part Two gives a special survey of law and economics publications in Europe written in other languages than English. The *Bibliography of Law and Economics* is an invaluable reference work for students, scholars, lawyers, economists, and other people interested in this field.

The Moral Dimensions of Public Policy Choice John Martin Gillroy, Maurice Wade, 1992-08-15 Combining philosophy with practical politics, an expanding area of policy studies applies moral precepts, critical principles, and conventional values to collective decisions. This evolving new approach to policy analysis asserts that the same variety of ethical principles available to the individual are also available to make collective decisions in the public interest and should be used. Although policy analysis has long been dominated by assumptions originally developed for the examination of markets such as efficiency, these essays by leading scholars, the best work done in the field over the past three decades, explore alternatives to the market paradigm and show how moral discrimination and choice can extend beyond the individual to encompass public decisions. Chapters by John Martin Gillroy and Maurice Wade review the political philosophies of Immanuel Kant and David Hume as backgrounds for the development of modern concepts of public policy choice. They
