People A Nation Vtwo Text Atlas:

The Rise and Fall of the National Atlas in the Twentieth Century John Rennie Short, 2022-07-12 Between 1900 and 2000 more than seventy countries produced a national atlas an official or quasi official rendering of the nation state in maps and accompanying text This book considers the reasons behind and characteristics of this state sponsored cartographic explosion These national atlases mirror and embody some of the important themes of this turbulent century including the complex connections between nation state and territory the rise of state sponsored science the growth of nation states colonialism and postcolonialism and the geography of biopolitics

Mapping Europe's Borderlands Steven Seegel, 2012-05-14 The simplest purpose of a map is a rational one to educate to solve a problem to point someone in the right direction Maps shape and communicate information for the sake of improved orientation But maps exist for states as well as individuals and they need to be interpreted as expressions of power and knowledge as Steven Seegel makes clear in his impressive and important new book *Mapping Europe's Borderlands* takes the familiar problems of state and nation building in eastern Europe and presents them through an entirely new prism that of cartography and cartographers Drawing from sources in eleven languages including military historical pedagogical and ethnographic maps as well as geographic texts and related cartographic literature Seegel explores the role of maps and mapmakers in the East Central European borderlands from the Enlightenment to the Treaty of Versailles For example Seegel explains how Russia used cartography in the aftermath of the Napoleonic Wars and later formed its geography society as a cover for gathering intelligence He also explains the importance of maps to the formation of identities and institutions in Poland Ukraine and Lithuania as well as in Russia Seegel concludes with a consideration of the impact of cartographers regional and socioeconomic backgrounds educations families career options and available language choices

Mapping the Nation Susan Schulten, 2020-03-04 A compelling read that reveals how maps became informational tools charting everything from epidemics to slavery *Journal of American History* In the nineteenth century Americans began to use maps in radically new ways For the first time medical men mapped diseases to understand and prevent epidemics natural scientists mapped climate and rainfall to uncover weather patterns educators

mapped the past to foster national loyalty among students and Northerners mapped slavery to assess the power of the South After the Civil War federal agencies embraced statistical and thematic mapping in order to profile the ethnic racial economic moral and physical attributes of a reunified nation By the end of the century Congress had authorized a national archive of maps an explicit recognition that old maps were not relics to be discarded but unique records of the nation s past All of these experiments involved the realization that maps were not just illustrations of data but visual tools that were uniquely equipped to convey complex ideas and information In Mapping the Nation Susan Schulten charts how maps of epidemic disease slavery census statistics the environment and the past demonstrated the analytical potential of cartography and in the process transformed the very meaning of a map Today statistical and thematic maps are so ubiquitous that we take for granted that data will be arranged cartographically Whether for urban planning public health marketing or political strategy maps have become everyday tools of social organization governance and economics The world we inhabit saturated with maps and graphic information grew out of this sea change in spatial thought and representation in the nineteenth century when Americans learned to see themselves and their nation in new dimensions National Hardware Bulletin ,1925

Representing the Republic John R. Short,2001 Representing the Republic provides an intriguing account of the mapping of America from its colonial origins to 1900 The most significant maps and mapmakers are discussed in a survey that begins with the first European mappings of New Netherlands in the early seventeenth century and concludes with the Rand McNally atlases of the 1890s Maps tell us a great deal about the transformation of America s national identity Having undertaken extensive research in map collections including work with rare archival materials prominent geographer John Rennie Short provides an account of how maps have both embodied and reflected power conflict and territorial expansion over time opening a new perspective on North American history and geography **Politics** Virginie Mamadouh,2017-05-15 Depending on the breadth or narrowness of the understanding of politics and the political politics in human geography is defined as either the operation of power in all social relations or the workings of power directed to or by the state This volume avoids the two extremes by acknowledging the transformation of approaches to the political in human geography over the past few decades but also by highlighting the continued importance of the more traditional state based conception of politics The selected articles are clustered around six themes new agendas in political geography state territoriality international relations and globalization internal territorial organisation and geographical scale social movements and electoral participation and identities and citizenship **National Library of Medicine Audiovisuals Catalog** National Library of Medicine (U.S.), **Daily Report** ,1988-10 *Age of Exploration* Elisabeth Kaske,Elisabeth Köll,2024-08-19 In the early twentieth century Chinese intellectuals came to realize that Westerners surpassed them not only in knowledge of the world but also in knowledge of China itself A rising generation of Chinese scientists engineers and administrators was eager to address this state of affairs and began to retrace the footsteps of Western explorers who had crisscrossed China

during the preceding century The nine case studies assembled in this book show how a new cohort of professional Chinese explorers traveled studied appropriated and reshaped national space from the 1920s to the 1950s In some instances the explorers drew directly from the fieldwork practices of their Western predecessors In others they trained compilers to collect and systematize local knowledge that could be passed up the administrative hierarchy to government and national institutions Their projects helped to claim natural resources prepare for infrastructural development and create new institutionalized knowledge and public engagement with textual representations of China s geobody This book elucidates the ways in which knowledge production in early twentieth century China centered on space and contributed to China s transformation into a modern nation state *Surveying and Mapping* ,1954 **Atlas of Yellowstone** W.
