People Machines:

Machines Abraham P. DeLeon, 2015-01-01 This book is about machines those that have been actualized fantastical imaginal machines to those deployed as metaphorical devices to describe complex social processes Machines argues that they transcend time and space to emerge through a variety of spaces and places times and histories and representations They are such an integral fabric of daily reality that their disappearance would have immediate and dire consequences for the survival of humanity They are part and parcel to our contemporary social order From labor to social theory art or consciousness literature or television to the asylums of the 19th century machines are a central figure an outgrowth of affective desire that seeks to transcend organic limitations of bodies that whither age and die Machines takes the reader on an intellectual artistic and theoretical journey weaving an interdisciplinary tale of their emergence across social cultural and artistic boundaries With the deep engagement of various texts Machines offers the reader moments of escape alternative ways to envision technology for a future yet to materialize Machines rejects the notion that technological innovations are indeed neutral propelling us to think differently about those things created under specific economic or historical paradigms Rethinking machines provides a rupture to our current technocratic impetus shining a critical light on possible alternatives to our current reality Let us sit back and take a journey through Machines holding mechanical parts as guides to possible alternative futures

The Hidden People Paul H. Deal, 2002 Lems small furry people live in secret passages within the buildings of the much larger zooks Zooks hunt poison and trap their small neighbors unaware of their true nature Then the lem leader Old Gray announces The time has come and the lems leave their warrens and begin a prophesied journey to the Portal where the Chosen are destined to go to a mysterious place called Tomorrow Zooks learn of the exodus and frightened by the danger the lems pose to long term zook security begin an all out campaign to destroy them before any escape Trez thirteen years old and Chosen flees with his mother and sister from the only home they have ever known Racing against time he and his family cross deserts forests and mountains living on what they can find or steal from their zook enemies Along the way they dodge the zooks their fierce deggs and kaats and the most awesome danger of all zook hunter killer robots Driven by faith as much as reason they risk all to fulfill a prophecy they scarcely comprehend in search of a future beyond their imagination

The War of the Ghosts and Machines Mike Hockney, 2015-09 Are you a ghost or a machine You don't need to be a superstitious believer to support the side of the ghosts Machine people reduce everything to lifeless mindless purposeless atoms of matter the ultimate little machines For ghost people reality reduces to dimensionless mathematical singularities which are none other than the hyperirrational monadic souls posited by Pythagoras and Leibniz Ghost people subscribe to atoms minds with atomic number zero i.e. minds souls are made of massless dimensionless photons Machine people start with hydrogen atoms with atomic number one All ghost entities are associated with zero and infinity All

machine people deny the existence of zero and infinity Mathematically these are the two numbers where the ghosts and the machines collide head on This book is all about demonstrating that there are indeed ghosts in the machines **Extending Mechanics to Minds** Jon Doyle,2006-05-22 This book deploys the mathematical axioms of modern rational mechanics to understand minds as mechanical systems that exhibit actual not metaphorical forces inertia and motion Using precise mental models developed in artificial intelligence the author analyzes motivation attention reasoning learning and communication in mechanical terms These analyses provide psychology and economics with new characterizations of bounded rationality provide mechanics with new types of materials exhibiting the constitutive kinematic and dynamic properties characteristic of different kinds of minds and provide philosophy with a rigorous theory of hybrid systems combining discrete and continuous mechanical quantities The resulting mechanical reintegration of the physical sciences that characterize human bodies and the mental sciences that characterize human minds opens traditional philosophical and modern computational questions to new paths of technical analysis **The Mental Health of Gifted Intelligent Machines** John Senior,Éva

Gyarmathy,2024-02-13 The Mental Health of Gifted Intelligent Machines explores the increasingly sophisticated behaviours of developing AI and how we can ensure it will have emotional resilience ethical strength and an ability to think in a new and enhanced way Its primary aim is to change how we understand the world by investigating humanity as an intelligent being examining and contrasting human and artificial intelligence The book considers what we can learn from the likely mental health issues that will occur with increasingly sophisticated aspects of machine intelligence and how they will reflect the human condition It asks questions about our identity in a deeply uncertain and disruptive ever changing world how we will improve and enhance our psychological intelligence to meet the increasing complications and demands of the future and what we need to do now to be psychologically intelligent enough to live a full meaningful life in a new world evolving around us The book argues that changes in our understanding of mental health psychology and our view of intelligence will challenge huge aspects of our fundamental beliefs and assumptions and that it is essential we explore new arenas to further understand both our own human psychological issues and mental health as we develop gifted intelligent machines It is a must read for all students researchers and professionals involved with AI gifted education consciousness and mental health

Automation 4.0: Object-oriented Development Of Modular Machines For Digital Production Thomas Schmertosch,Markus Krabbes,Christian Zinke-wehlmann,2025-02-25 The fourth industrial revolution places a number of additional demands on the design and automation of processing machines Digitalization and automation are making products and their manufacturing processes not only more sophisticated but also more individual Growing demands on availability logistics quality and extreme price sensitivity are not leaving the production environment unscathed This book analyses the challenges and provides meaningful examples of solution scenarios for effective production in the age of Industry 4 0 Automation 4 0 shows readers how the requirements of Industry 4 0 may be projected onto known design principles The

resulting functions are illustrated using real life examples from industry to create a roadmap for drawing up a specification sheet for the design of a versatile processing machine Numerous practical examples illustrate the modular function and object oriented design of individual machines and systems as a solution for increasing efficiency throughout their entire life cycle To this end a procedure for the design of versatile machines based on object and function oriented modularization is presented and illustrated and elaborated step by step on the basis of the requirements This book presents solution strategies that address the additional demands of modularization on the structure and component selection of automation systems flexibly sustainably and with minimal engineering effort These include aspects of real time capability as well as machine safety and the selection of a suitable fieldbus human machine communication and the ability to interact in digital production Finally the topics of AI supported quality assurance simulation and digital twins are also addressed and the current state of research on the interaction of Industry 4 0 components is conveyed The book offers a comprehensive overview of the development of sustainable machines particularly in terms of cost effectiveness for very small batch sizes It is not only for students of automation technology and mechatronics but also for industrial development and design engineers
