Delivery Systems for Peptide Drugs S.S. Davis, Lisbeth Illum, E. Tomlinson, 2013-11-11 Recent years have seen enormous advances in the field of protein and peptide engineering and a greater understanding in the way in which biological response modifiers function in the body. It is now possible through the use of recombinant DNA techniques or by solid phase protein synthesis to produce significant quantities of a wide variety of regulatory agents that are therapeutically applicable. The list of these response modifiers expands almost daily to include interferons, macrophage activation factors, neuropeptides and agents that may have potential in cardiovascular disease, inflammation, contraception etc. Prospects to use some of these materials in medicine have reached the stage where products have either been approved by regulatory authorities or are the subject of applications as investigatory drugs or as new therapeutic agents. In some cases the pertinent agent will be administered on an acute basis in the form of a simple injection as for example the use of a tissue plasminogen activator for the treatment of coronary infarct. In other cases regulatory proteins and peptides are indicated for chronic therapy and here they will need to be administered by an appropriate delivery system. Unfortunately the research on delivery systems for peptides and proteins has not kept pace with the rapid progress in biotechnology and consequently there are presently few systems that are entirely appropriate for the administration of macromolecular drugs according to complex dosage regimens eg intermittent and pulsed therapy. Furthermore essential pharmacokinetic and pharmacodynamic data may be missing.

Nanomedicine Kenneth A. Howard, Thomas Vorup-Jensen, Dan Peer, 2016-05-27 This title is a comprehensive text that addresses key aspects of nanomedicine such as properties occurring at the nanoscale that have unique medical effects, great molecular knowledge of the human body and disease processes and apparent clinical translation as opposed to narrow, insufficient texts that address only a few topics and attempt to rebrand established drug delivery. It will clearly define the field which is needed due to the immaturity and broad nature of the field. The book is aligned with both the USA and

European roadmaps for nanomedicine and will address initiatives taken in Asia that ensures timely and relevant content In depth chapters ensure each section is adequately covered The nanopharmaceutical section focuses on novel drug delivery systems relevant to nanomedicine and the book has an extensive section on immune recognition at the nanoscale which has implications for in vivo applications of nanomedicines

Erythropoietins, Erythropoietic Factors, and Erythropoiesis Steven G.

Elliott, MaryAnn Foote, Graham Molineux, 2009-06-05 Research on and interest in red blood cell formation spans several centuries and was thought to have peaked in the 1980s with the cloning of the erythropoietin EPO gene. In the years subsequent to the cloning of EPO and its expression as a recombinant protein much has been learned and published. New exciting data are becoming available on almost a daily basis. Erythropoietins and Erythropoiesis Molecular Cellular Preclinical and Clinical Biology compiles both pertinent historical and very recent research on this molecule and its clinical utility. The book is divided into two sections: Background and Basic Science and Clinical Uses of Recombinant Erythropoietins. To begin, Israels and Israels describe the biology of red cells, the hierarchy of erythropoietic progenitor cells, their development to mature cells, and the effects of endogenous EPO on their development. Foote summarizes the historical interest in and search for an erythropoietic factor. Once EPO was identified, cloned, and expressed, the path was set for the study of other aspects of EPO biology, both within erythropoiesis and other cellular systems. HPLC for Pharmaceutical Scientists Yuri V. Kazakevich, Rosario LoBrutto, 2006-12-13 HPLC for Pharmaceutical Scientists is an excellent book for both novice and experienced pharmaceutical chemists who regularly use HPLC as an analytical tool to solve challenging problems in the pharmaceutical industry. It provides a unified approach to HPLC with an equal and balanced treatment of the theory and practice of HPLC in the pharmaceutical industry.
