Perceiving And Remembering Faces:

Perceiving and Remembering Faces Graham Davies, Hadyn Ellis, John Shepherd, 1981 The processes by which we recognise or fail to recognise another face have a perennial fascination for laymen and scientists alike However it is only in recent years that the problem has received systematic study by experimental psychologists This book brings together such new information for the first time in the form of a set of review articles each written by a leading researcher in the field Contributions have been grouped into those where the primary emphasis is upon theory and those where the major concern is with applied problems Among the issues encompassed by the theory section are face recognition in infants and children disturbance associated with brain damage social and racial aspects the perception of emotion in the face and the significance of different physiognomic areas in mediating recognition The relationship of face recognition both to other memory processes and to information processing in general is also extensively covered In the applied section areas considered include psycho legal aspects of identification with special reference to parades or line ups studies of recall tools like Identikit and Photofit the computerised identification and retrieval of facial images and the effectiveness of training procedures designed to improve facial memory **Perceiving and Remembering Faces** is invaluable to psychologists whether academics working in higher education or applied practitioners such as clinical psychologists The emphasis on practical as well as theoretical issues however ensures that the book is also of considerable interest to lawyers criminologists and law enforcement specialists or indeed to anyone whose work brings them into contact with that central enigma of all human perception and communication the human face

Raymond Bruyer, 2014-04-04 This book is the first to offer an overview of the increasingly studied field of face perception Experimental and pathological dissociation methods are used to understand both the precise cognitive mechanisms and the cerebral functions involved in face perception Three main areas of investigation are discussed face processing after brain damage lateral differences for face processing in normals neuropsychological studies on facial expressions Aspects of Face Processing H.D. Bachmann, 2016-01-21 Perception of Pixelated Images covers the increasing use of these images in everyday life as communication socialization and commerce increasingly rely on technology The literature in this book is dispersed across a wide group of disciplines from perception and psychology to neuroscience computer science engineering and consumer science The book summarizes the research to date answering such questions as What are the spatial and temporal limits of perceptual discrimination of pixelated images What are the optimal conditions for maximizing information extracted from pixelated images and How does the method of pixelation compromise or assist perception Integrates research from psychology neuroscience computer science and engineering Explains how the process of perception works for pixelated images Identifies what assists and hinders perception including the method of pixelation Discusses the limits of perception of pixelated images Developments in Clinical and Experimental Neuropsychology John R. Crawford, Denis M.

Parker, 2013-06-29 The chapters published in this volume developed from presentations and their associated discussions at a conference organised by the Scottish Branch of the British Psychological Society held at Rothesay Isle of Bute Scotland in September 1987 The goal of the conference was to bring together workers across a wide area of neuropsychological research to discuss recent technological advances developments in assessment and rehabilitation and to address theoretical issues of current interest Thus the chapters in this book include contributions on the use of Magnetic Resonance Imaging and Single Photon Emission Computed Tomography in neuropsychological research studies of hemi spheric specialisation and cooperation alcoholic and Alzheimer type dementia prosopagnosia and facial processing the assessment management and rehabilitation of memory problems the assessment of premorbid intellectual status and issues in developmental neuropsychology Many of those engaged in research and clinical practice in neuropsychology encounter a range of topic at least as wide as this in their professional lives The opportunity for researchers and clinicians to discuss some of the key issues in the field was invaluable and we hope that readers gain as much from the material presented here as the participants did from the meeting itself *The Handbook of Eyewitness Psychology: Volume II* R.C.L. Lindsay, David F.

Ross, J. Don Read, Michael P. Toglia, 2007-02-13 The Handbook of Eyewitness Psychology presents a survey of research and

Mathematical Models of Perception and Cognition Volume II Joseph W. Houpt,Leslie M. Blaha,2016-05-20 In this two volume festschrift contributors explore the theoretical developments Volume I and applications Volume II in traditional cognitive psychology domains and model other areas of human performance that benefit from rigorous mathematical approaches It brings together former classmates students and colleagues of Dr James T Townsend a pioneering researcher in the field since the early 1960s to provide a current overview of mathematical modeling in psychology Townsend s research critically emphasized a need for rigor in the practice of cognitive modeling and for providing mathematical definition and structure to ill defined psychological topics The research captured demonstrates how the interplay of theory and application bridged by rigorous mathematics can move cognitive modeling forward

Classic Cases in Neuropsychology Chris Code,Yves Joannette,André Roch Lecours,Claus-W Wallesch,2004-08-02 The importance of detailed examination and theoretical interpretation of the single case has been increasingly recognized in neuropsychology This book

brings together in one volume discussion of the classic cases which have shaped the way we think about the relationships between brain behaviour and cognition The single cases covered may be ancient or modern famous or less well known But the book is comprehensive in its coverage of contemporary neuropsychological issues Represented are classic cases in language memory perception attention and praxis Some of the cases included are rare or have acted as catalysts to the development of theory Some have remained the definitive case many were the first of their type to be described and gave rise to the development of new syndrome entities Some are still controversial In some instances the cases resulted in major paradigm shifts Some while still highly influential were misinterpreted But most of them were read only by a few in their original form Each chapter highlights the relevance of the case for the development of neuropsychology describes the particular features of the case that are interesting and discusses the theoretical implications

Psychological Issues in Eyewitness Identification Siegfried L. Sporer, Roy S. Malpass, Guenter Koehnken, 2014-06-03 Why do police officers investigators prosecutors judges and others with an interest in eliciting accurate memory based testimony need to inform themselves of the research literature in experimental psychology that addresses the question of witness memory The answer is straightforward from the perspective of a simple cost benefit analysis As with so many matters in the administration of public funds effectiveness holds important rewards Those who investigate crimes and decide which line of investigation to pursue and which line to postpone or set aside necessarily make judgments about the likely guilt of suspects based on the information at hand If they can make these judgments with a high degree of accuracy everyone benefits For many cases eyewitness identification is an important component of evidence prosecution and plea negotiation If witness identification is correctly implemented investigators and prosecutors can make their judgments effectively and focus their resources more efficiently A major component of effectiveness requires avoiding expending scarce resources on erroneous prosecutions It is in everyone's interest to make the best use of the memory of witnesses to preserve it without changing it to render it maximally accessible to provide an environment in which witnesses feel free to report their recollections and to accurately assess the probable validity of the witness's report regardless of the witness's certainty or doubts about its accuracy This volume gathers evidence from various research domains on eyewitness testimony Although many of the studies discussed deal with eyewitness identification it is noteworthy that many of them also touch upon other areas of concern to eyewitness researchers including chapters on voice recognition by humans and computers with particularly detailed instructions on conducting voice lineup differential aspects of recognition memory in children elderly eyewitness memory problems of cross racial identification psychological aspects of facial image reconstruction techniques person descriptions particular benefits of reinstating context as a means to improve eyewitness memory problems associated with various research paradigms in the eyewitness arena and recommendations on how to conduct lineups and photospreads and their proper evaluation Differentiated from other literature on this topic by its non technical language and accessibility to non professionals this

volume covers a great deal of ground raises a host of questions settles some others and points the way to more effective use and evaluation of what eyewitnesses have to say Perceptual Expertise Isabel Gauthier, Michael Tarr, Daniel Bub, 2010 This book explores visual object recognition and introduces a collaborative model codified as the Perceptual Expertise Network PEN It focuses on delineating the principles of high level visual learning that can account for how different object categories are processed and associated with spatially localized activity in the primate brain It address questions such as how expertise develops whether there are different kinds of experts whether some disorders such as autism or prosopagnosia can be understood as a lack or loss of expertise and how conceptual and perceptual information interact when experts recognize and categorize objects The research and results that have been generated by these questions are presented here along with other questions background information and extant issues that have emerged from recent studies *Handbook of Research on Face Processing* A.W. Young, H.D. Ellis, 2013-10-22 The high degree of scientific interest in face processing is readily understandable since people's faces provide such a wealth of social information Moreover investigations have produced evidence of highly precocious face processing abilities in infants and of neural mechanisms in adults that seem to be differentially involved in face perception Such findings demonstrate that as one might expect the psychological importance of the face has clear biological underpinnings There are also urgent practical reasons for wanting to understand face processing The most extensively investigated of these involve forensic issues Other applications include the development of automated recognition systems for security and other purposes and understanding and rehabilitating disorders and impairments linked to brain injuries and psychiatric conditions Current studies of face processing are grouped in the volume into eleven topic areas For each area the editors approached an acknowledged authority and commissioned a review chapter summarising the findings that have been made These chapters were then circulated to other experts who were asked to write brief commentaries that developed theoretical or empirical points of importance to each area In this way a balanced coverage of each topic is achieved The book begins with a section examining the evidence suggesting that there may be something special about face processing This is followed by consideration of the face as a visual pattern Then there are four sections dealing with major uses of facial information followed by sections discussing the development of face processing abilities and the neural mechanisms involved The last three sections of the book deal with topics for which there are important practical applications for the studies reported *The Science of Perception and Memory* Daniel Reisberg, 2014 A robbery victim tries to remember how the crime unfolded and who was present at the scene A medical patient recalls the doctor saying that the pain in her side wasn't worrisome and now that the tumor is much larger she's suing An investigation of insider trading hinges on someone's memory of exactly what was said at a particular business meeting In these and countless other examples our ability to remember our experiences is crucial for the justice system The problem though is that perception and memory are fallible How often do our eyes or memories deceive us Is there some way to avoid these errors

Can we specify the circumstances in which perceptual or memory errors are more or less likely to occur Professor Daniel Reisberg tackles these questions by drawing on the available science and his personal experience training attorneys He provides detailed pragmatic advice that will prove helpful to law enforcement prosecutors defenders and anyone else who hopes to maximize the quality of the evidence available to the courts whether the evidence is coming from witnesses victims or defendants This book is carefully rooted in research but written in a way that will make it fully accessible to non scientists working in the justice system Early chapters provide an overview of the relevant science and a broad portrait of how perception and memory function Later chapters offer practical solutions for navigating situations involving eyewitness identifications remembered conversations evidence obtained from interviews with children confession evidence and the risks of false confession

Human Perception Marco Bertamini, Michael Kubovy, 2018-05-08 It takes little or no effort for us to gather information by means of our senses but it would be a mistake to take this as a sign that perception is simple It was in the 20th century and after the establishment of psychology as a scientific discipline that the study of perception flourished This important volume gathers together a selection of articles and essays which represent some of the most interesting discoveries and theories It gives a flavour of the many different approaches and ideas taken by cognitive psychologists in this fascinating area Topics covered include attention brain systems object interpolation and completion object recognition and classification different types of objects and information processing and models

Adult Eyewitness Testimony David Frank Ross, J. Don Read, Michael P. Toglia, 1994-03-25 Investigates the factors that influence the accuracy of eyewitness testimony

Aims and Methods in Neuroethology David Maltby Guthrie, 1987

Functions of the Right Cerebral Hemisphere Andrew Young, 2012-12-02 Functions of the Right Cerebral Hemisphere discusses the studies of the different functions served by the right hemisphere in light of knowledge as well as normal and clinical studies on the subject The book covers topics such as the visuospatial abilities of the right hemisphere the analysis of basic perceptual properties its creation and operation on representations studies on the function of the right hemisphere in relation to music and the language capabilities of the right hemisphere Also covered in the book are the methods for studying cerebral hemispheric function the development of right hemispheric abilities and the relation of the right hemisphere to reading disorders The text is recommended for neurologists who would like to know more or make a study on the right hemisphere and its functions

Computational, Geometric, and Process Perspectives on Facial Cognition Michael J. Wenger, James T. Townsend, 2005-04-11 Within the last three decades interest in the psychological experience of human faces has drawn together cognitive science researchers from diverse backgrounds Computer scientists talk to neural scientists who draw on the work of mathematicians who explicitly influence those conducting behavioral experiments The chapters in this volume illustrate the breadth of the research on facial perception and memory with the emphasis being on mathematical and computational approaches In pulling together these chapters the editors sought to do much more than illustrate breadth

They endeavored as well to illustrate the synergies and tensions that inevitably result from adopting a broad view one consistent with the emerging discipline of cognitive science
