Population Resources And Development Vol 1 Riding The Age Waves:

Population, Resources and Development Shripad Tuljapurkar, David Ian Pool, 2005 In the 21st century the populations of the world's nations will display large and long lived changes in age structure Many of these began with fertility change and are amplified by declining mortality and by migration within and between nations Demography will matter in this century not by force of numbers but by the pressures of waves of age structural change Many developing countries are in relatively early stages of fertility decline and will experience age waves for two or more generations These waves create shifting flows of people into

Allocating Public and Private Resources across Generations Anne H. Gauthier, C.Y. Cyrus Chu, Shripad Tuljapurkar, 2007-08-24 This book explores how demographic changes affect inter generational transfers of time money goods and services all things that play a role in the well being of individuals and families It details the nature and measurement of transfers their motives and mechanisms and their macro level dimensions especially in the context of demographic transitions Coverage includes original empirical analyses of datasets from some twenty countries and extends the traditional analysis of inter generational transfers by examining different types of transfers

Ageing in Advanced Industrial States Shripad Tuljapurkar, Naohiro Ogawa, Anne H. Gauthier, 2010-08-02 Population growth slowed across the world in the last decades of the 20th century changing substantially our view of the future The 21st century is likely to see the end to world population growth and become the century of population aging marked by low fertility and ever increasing life expectancy These trends have prompted many to predict a gloomy future caused by an unprecedented economic burden of population aging In response industrialized nations will need to implement effective social and economic policies and programs This is the final volume in a series of three The papers included explore many examples and strengthen the basis for effective economic and social policies by investigating the economic social and demographic consequences of the transformations in the structures of population and family These consequences include changes in economic behavior both in labor and financial markets and with regard to saving and consumption and intergenerational transfers of money and care

Development and the Next Generation Gudrun Kochendörfer-Lucius, Boris Pleskovic, 2007 The Berlin Workshop Series is

a forum for the discussion of issues in development that are likely to have enduring relevance for research and policymaking. These discussions are the building blocks to develop the framework which shapes the World Development Report. It brings together key decision makers and researchers from the United States, Europe and developing countries to discuss and brainstorm on development challenges.

World Population Policies John F. May, 2012-03-28 This book examines the history behind the formulation, implementation and evaluation of population policies in the more developed, the less developed and the least developed countries from 1950 until today as well as their future prospects. It links population policies with the theories of the demographic, epidemiological and migratory transitions. It begins by summarizing the demographic situation around the world with an emphasis on population policies and their underlying theories. Then it reviews the early efforts to reduce mortality and fertility in the developing countries. This is followed by a description of the internationalization of the debate on population issues and the transformation of these programs into more formal population policies, particularly in the developing countries. The book reviews also the situation of the developed countries and their specific challenges: sub replacement fertility, population aging and immigration and examines the effectiveness of population policies. It also explores the way forward and future prospects for population policies over the next decades. The book provides numerous concrete examples from all over the world and show how population policies are actually implemented and what have been their successes as well as their constraints. Above all the book highlights the importance of understanding underlying demographic trends when assessing the development prospects of any country. The book is recommended for not only demographers, social scientists and policymakers but also economists and political scientists who are interested in social and demographic change around the world. Demography students and researchers who are interested in applying knowledge on population trends and prospects in designing and evaluating public policies will find this an invaluable reference work.

International Handbook of Population Aging Peter Uhlenberg, 2009-04-29 The International Handbook of Population Aging examines research on a wide array of the profound implications of population aging. It demonstrates how the world is changing through population aging and how demography is changing in response to it.

The Children of Eve Louis P. Cain, Donald G. Paterson, 2012-04-03 The Children of Eve is the first book to bring together general material about population and well being in a single volume. It presents a world history of demographic and economic change that ranges broadly over time and space and which emphasizes the commonality of human experience. The first book to put together material about population and well being in a single volume. Emphasizes the formative population history of Europe and North America over the years since the Middle Ages and includes discussions of Asia and the southern hemisphere. The authors successfully maintain the difficult balance of addressing complex issues in a style that doesn't oversimplify the subject whilst upholding an approach that is accessible to general readers and students. Designed to work as both a stand alone text or a supplement to textbooks in any number of courses.

Routledge Handbook of Asian

Demography Zhongwei Zhao, Adrian C. Hayes, 2017-12-14 Home to close to 60 per cent of the world's population Asia is the largest and by far the most populous continent. It is also extremely diverse physically and culturally. Asian countries and regions have their own distinctive histories, cultural traditions, religious beliefs and political systems and they have often pursued different routes to development. Asian populations also present a striking array of demographic characteristics and stages of demographic transition. This handbook is the first to provide a comprehensive study of population change across the whole of Asia. Comprising 28 chapters by more than 40 international experts, this handbook examines demographic transitions on the continent, their considerable variations, their causes and consequences and their relationships with a wide range of social, economic, political and cultural processes. Major topics covered include population studies and sources of demographic data, historical demography, family planning and fertility decline, sex preferences, mortality changes, causes of death, HIV/AIDS, population distribution and migration, urbanization, marriage and family, human capital and labour force, population ageing, demographic dividends, political demography, population and environment and Asia's demographic future. This handbook provides an authoritative and comprehensive reference for researchers, policymakers, academics, students and anyone who is interested in population change in Asia and the world.

Functional Urban Areas in Poland Sławomir Kurek, Mirosław Wójtowicz, Jadwiga Gałka, 2019-09-20 This book explores demographic changes in Functional Urban Areas (FUAs) in Poland since 1990. Functional Urban Areas introduced by ESPON refer to functional territorial units that can be defined as travel to work areas representing strong integration between urban cores and their immediate hinterland. The functional urban area consists of a city plus its commuting zone. It fills a significant gap in the academic literature by providing a deep and thorough analysis of the process of population change in Polish FUAs over the past 30 years. In particular, this empirical research work addresses population growth and decline, the main components of population growth including fertility, mortality and migration, age composition and the pace of population ageing. The book argues that the transformations of urban structures are triggered by second demographic transition (SDT) and suburbanization processes. Based on data from the Central Statistical Office, this comparative study on FUAs in Poland, which employs a division into core and commuting zones, reveals essential similarities and differences in population development, making it possible to construct a demographic typology of FUAs and investigate their spatial arrangements. A unique and innovative book, it will appeal to geographers, demographers, urbanists, city planners and policymakers as well as students, academic researchers and others involved in urban studies.
