Understanding Neighbourhood Dynamics

Maarten van Ham,David Manley,Nick Bailey,Ludi Simpson,Duncan Maclennan,2012-09-26 This rare interdisciplinary combination of research into neighbourhood dynamics and effects attempts to unravel the complex relationship between disadvantaged neighbourhoods and the life outcomes of the residents who live therein It seeks to overcome the notorious difficulties of establishing an empirical causal relationship between living in a disadvantaged area and the poorer health and well being often found in such places There remains a widespread belief in neighbourhood effects that living in a poorer area can adversely affect residents life chances These chapters caution that neighbourhood effects cannot be fully understood without a profound understanding of the changes to and selective mobility into and out of these areas Featuring fresh research findings from a number of countries and data sources including from the UK Australia Sweden and the USA this book offers fresh perspectives on neighbourhood choice and dynamics as well as new material for social scientists geographers and policy makers alike It enriches neighbourhood effects research with insights from the closely related but currently largely separate literature on neighbourhood dynamics

Demographic Change in Uruguay Rafael

Rofman,Verónica Amarante,Ignacio Apella,2016-06-10 The population of Uruguay is undergoing a slow but sustained aging process driven by the demographic transition that started early in the twentieth century While this reflects significant improvements in mortality and fertility trends it also creates important challenges for the fiscal sustainability of some social policies and the economic trends in the medium and long term Uruguay is currently going through the demographic bond stage of this process as the proportion of the population aged between 15 and 65 years old is peaking This temporary situation creates the possibility of increasing the endowment of capital and labor force and entering a path of sustained economic growth For this to happen it is necessary to generate institutional financial and fiscal conditions that promote larger savings and investment to increase the productivity of the economy and sustain per capita GDP growth This book studies the opportunities and challenges that the demographic transition poses for Uruguay s economy Once the demographic bond has passed population aging will have a significant impact on fiscal accounts especially in social protection expenditures This represent a serious policy challenge demanding reforms to adapt the institutions and systems to

a new demographic context The main challenge for Uruguay in the next few decades will be to maintain a solid economic growth path in the context of a diminishing working age population This will require that labor force participation rates increase particularly among women and older citizen but also that those in the labor market increase their productivity This will be achieved only through sustained growth of capital per worker ratio and the incorporation of innovations and technological developments that facilitate increased production of goods and services for the entire population **Impact**

of Demographic Changes on Inflation and the Macroeconomy Mr.Jong-Won Yoon,Mr.Jinill Kim,Junggjin Lee,2014-11-24

The ongoing demographic changes will bring about a substantial shift in the size and the age composition of the population which will have significant impact on the global economy Despite potentially grave consequences demographic changes usually do not take center stage in many macroeconomic policy discussions or debates This paper illustrates how demographic variables move over time and analyzes how they influence macroeconomic variables such as economic growth inflation savings and investment and fiscal balances from an empirical perspective Based on empirical findings particularly regarding inflation we discuss their implications on macroeconomic policies including monetary policy We also highlight the need to consider the interactions between population dynamics and macroeconomic variables in macroeconomic policy decisions Dynamic Demographic Analysis Robert Schoen,2016-03-15 This volume presents state of the art analyses from scholars dealing with a range of demographic topics of current concern including longevity mortality and morbidity migration and how population composition impacts intergenerational transfer schemes New approaches are applied to such issues as measuring changes in cohort survivorship in low mortality populations patterns of mortality improvement at older ages and the consequences of heterogeneity in the susceptibility to death Studies examine models of the current status of the HIV AIDS epidemic advance present methods for estimating population change in small areas and strive to disentangle age period and cohort effects In sum the book addresses key contemporary issues in measuring and modeling dynamic populations and advances the frontier of dynamic demography **Population Dynamics and Projection Methods** John Stillwell,Martin

Clarke,2011-02-15 Although the human population growth rate of the world has been declining since peaking in the early 1960s the populations of individual countries are changing at different rates Population dynamics at national level are partly determined by levels of fertility and mortality but the impact of international migration is playing an increasingly important role Moreover internal migration plays a major part in population change at the sub national level This fourth volume in the series Understanding Population Trends and Processes is a celebration of the work of Professor Philip Rees It contains chapters by contributors who have collaborated with Phil Rees on research or consultancy projects or as postgraduate students Several chapters demonstrate the technical nature of population projection modelling and simulation methods while others illustrate issues relating to data availability and estimation This book demonstrates the application of theoretical and modelling methods and addresses key issues relating to contemporary demographic patterns and trends **Demographic**

Change in Coastal Fishing Communities and Its Implications for the Coastal Environment Uwe Tietze,G.

Groenewold,Alain Marcoux,Food and Agriculture Organization of the United Nations,2000-01-01 An increase in the number of fishers as a result of population growth and migration to coastal fishing communities can be a contributing factor in the overexploitation of fisheries resources and the deterioration of the coastal environment The findings of the development dynamics of rural fishing communities suggest that contrary to the assumed global trend the number of coastal fishers has started to decline or stagnate in recent years in some developing countries The findings further suggest that artisanal fisheries no longer are a last resort employment for people in some coastal areas
