Population Change And The Economy:

Population Change and the Economy: Social Science Theories and Models Andrew M. Isserman, 1985-11-30 Population change and population forecasts are receiving considerable attention from governmental planners and policy makers as well as from the private sector. Old patterns of population redistribution, industrial location, labor force participation, household formation, and fertility are changing. The resulting uncertainty has increased interest in forecasting because mere extrapolations of past trends are proving inadequate. In the United States of America, population forecasts received even more attention after federal agencies began distributing funds for capital infrastructure to state and local governments on the basis of projected future populations. If the national government had based those funding decisions on locally prepared projections, the optimism of local officials would have resulted in billions of dollars worth of excess capacity in sewage treatment plants alone. Cabinet level inquiries concluded that the U.S. Department of Commerce should 1. assume the responsibility for developing a single set of projections for use whenever future population was a consideration in federal spending decisions and 2. develop methods which incorporate both economic and demographic factors causing population change. Neither the projections prepared by economists at the Bureau of Economic Analysis nor those prepared by demographers at the Bureau of the Census were considered satisfactory because neither method adequately recognized the intertwined nature of demographic and economic change. Against this background, the American Statistical Association (ASA) and the U.S. **The Demographic Dividend** David Bloom, David Canning, Jaypee Sevilla, 2003-02-13 There is long standing debate on how population growth affects national economies. A new report from Population Matters examines the history of this debate and synthesizes current research on the topic. The authors, led by Harvard economist David Bloom, conclude that population age structure, more than size or growth per se, affects economic development and that reducing high fertility can create opportunities for economic growth if the right kinds of educational, health, and labor market policies are in place. The report also examines specific regions of the world and how their differing policy environments have affected the relationship between population change and economic development. *The Impact of Population Growth on Well-being in Developing Countries* Dennis A. Ahlburg, Allen C. Kelley, Karen Oppenheim Mason, 1996-03-18 This book examines the nature and significance of the impact of population growth on the well-being of developing countries, in particular the effects on economic growth, education, health, food supply, housing, poverty, and the environment. In addition, because family planning programmes often significantly affect population growth, the study examines the impacts of family planning on fertility and health and the human rights implications of family planning programmes. In considering the book's conclusions about the impact of population growth on development, four caveats should be noted. First, the effects of population growth vary from place to place and over time. Thus, blanket statements about overall effects often cannot be made. Where possible, the authors note the contexts in which population effects are strongest and weakest. Second, all of the outcomes examined in this book are

influenced by factors other than population growth Moreover the impact of population growth may itself vary according to the presence or absence of other factors This again makes blanket statements about the effects of population growth difficult Throughout the chapters the authors try to identify other relevant factors that influence the outcomes we discuss or that influence the impact of population growth on those outcomes The Political Economy of Global Population Change, 1950-2050 Paul George Demeny, Geoffrey McNicoll, 2006

Economic Consequences of Population Change in Industrialized Countries G. Steinmann, 2012-12-06 The recent experience of industrialized countries with low fertility and persistent immigration has stimulated interest in the economic effects of population change in industrial countries and has led to new research in population economics In Germany however where these demographic trends were perhaps most pronounced research on population economics has lagged During recent years more German economists have also turned to this topic This upsurge in research activity motivated the organisation of an international conference entitled Economic Consequences of Population Change in Industrialized Countries which was held from June 1 to June 3 1983 at the University of Paderborn W Germany The conference was designed to discuss and assess the new theoretical and empirical research work on the effects of population change on the economy to intensify the international cooperation and to stimulate the research in population economics in W Germany This volume contains 23 revised versions of the 27 papers presented at the conference Although the topics of the papers are diverse they can be grouped into six general themes The first section including papers by Cigno Steinmann and Simon deals with models of the secular interrelationships between population change technical progress and economic growth The models are built upon the framework of neoclassical growth theory and are extended by the assumption that the rate of technical progress is positively linked with population growth or population density
