Embedded Computing Luis Miguel Pinho,Eduardo Quinones,Marko Bertogna,2022-09-01 Nowadays the prevalence of computing systems in our lives is so ubiquitous that we live in a cyber physical world dominated by computer systems from pacemakers to cars and airplanes These systems demand for more computational performance to process large amounts of data from multiple data sources with guaranteed processing times Actuating outside of the required timing bounds may cause the failure of the system being vital for systems like planes cars business monitoring e trading etc High Performance and Time Predictable Embedded Computing presents recent advances in software architecture and tools to support such complex systems enabling the design of embedded computing devices which are able to deliver high performance whilst guaranteeing the application required timing bounds Technical topics discussed in the book include Parallel embedded platforms Programming models Mapping and scheduling of parallel computations Timing and schedulability analysis Runtimes and operating systemsThe work reflected in this book was done in the scope of the European project P SOCRATES funded under the FP7 framework program of the European Commission High performance and time predictable embedded computing is ideal for personnel in computer communication embedded industries as well as academic staff and master research students in computer science embedded systems cyber physical systems and internet of things *Portable*

Parallelization of Industrial Aerodynamic Applications (POPINDA) Anton Schüller,2013-04-17 This book contains the main results of the German project POPINDA It surveys the state of the art of industrial aerodynamic design simulations on parallel systems POPINDA is an acronym for Portable Parallelization of Industrial Aerodynamic Applications This project started in late 1993 The research and development work invested in POPINDA corresponds to about 12 scientists working full time for the three and a half years of the project POPINDA was funded by the German Federal Ministry for Education Science Research and Technology BMBF The central goals of POPINDA were to unify and parallelize the block structured aerodynamic flow codes of the German aircraft industry and to develop new algorithmic approaches to improve the efficiency and robustness of these programs The philosophy behind these goals is that challenging and important numerical applications such as the prediction of the 3D viscous flow around full aircraft in aerodynamic design can only be carried out successfully if the benefits of modern fast numerical solvers and parallel high performance computers are combined This combination is a conditio sine qua non if more complex applications such as aerodynamic design optimization or fluid structure interaction problems have to be solved When being solved in a standard industrial aerodynamic design process

such more complex applications even require a substantial further reduction of computing times Parallel and vector computers on the one side and innovative numerical algorithms such as multigrid on the other have enabled impressive improvements in scientific computing in the last 15 years
