Portrait Of Aphasia:

Portrait of Aphasia David Knox, 1985 **Neurological Disorders in Famous Artists** Julien Bogousslavsky, M. G. Hennerici, 2007-01-01 More on the relationship between brain disease and creativity *Neurological Disorders in Famous Artists* Part 2 presents more writers philosophers musicians painters and film directors who developed some form of neurological dysfunction and whose style and output changed following a stroke or other cerebral disorder Mozart Baudelaire de Kooning Proust F ssli Heine Fellini Visconti and others are all striking examples of how extraordinary creativity can be challenged and modified or destroyed and restored all within the drama of a disease When brain disease challenges the capabilities of artists the changes that subsequently occur in their work provide a unique opportunity to explore the mysteries of creativity This may also lead to a better understanding on how certain artists developed particularly when the course of a disease corresponds with what is generally recognized as a new chapter in their work This book offers a fascinating read for neurologists psychiatrists general physicians and anybody interested in art literature music and film

Aphasia, Assessment and Treatment Martha Taylor Sarno, 1980 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1971 *Lost Words* L. S. Jacyna, 2009-08-16 In the mid nineteenth century physicians observed numerous cases in which individuals lost the ability to form spoken words even as they remained sane and healthy in most other ways By studying this condition which came to be known as aphasia neurologists were able to show that functions of mind were rooted in localized areas of the brain Here L S Jacyna analyzes medical writings on aphasia to illuminate modern scientific discourse on the relations between language and the brain from the very beginnings of this discussion through World War I Viewing these texts as literature complete with guiding metaphors and rhetorical strategies Jacyna reveals the power they exerted on the ways in which the human subject was constructed in medicine Jacyna submits the medical texts to various critical readings and provides a review of the pictorial representation involved with the creation of aphasiology He considers the scientific experimental and clinical aspects of this new field together with the cultural professional and political dimensions of what would become the authoritative discourse about language and the brain At the core of the study is an inquiry into the processes whereby men and women suffering from language loss were transformed into the aphasic an entity amenable to scientific scrutiny and capable of yielding insights about the fundamental workings of the brain But what became of the subject s human identity *Lost Words* explores the links among language humanity and mental presence that make the aphasiological project one of continuing fascination **Right Hemisphere Stroke** Fred K. Johnson, 1990 Fred Johnson s book is valuable then not only as a testament to the courage and determination of one man but for the lessons it provides for medical students and health care professionals **Portraits of the L2 User** Vivian Cook, 2002-08-06 *Portraits of the L2 User* treats second language users in their own right rather than as failed native speakers It describes a range of psychological and linguistic approaches to diverse topics about L2 users It thus provides an

innovative overview of current second language acquisition theories results and methods seen from a common perspective
