Q And A A Sort Of Autobiography

R. A. Mapleton

Q And A A Sort Of Autobiography:

Asymptotic Form of the Electron Capture Cross Section in First Born and Distorted Wave Approximations R. A.

Mapleton, 1964 The first Born approximation with both the proton-proton and proton-electron interaction is used to calculate the high energy electron capture cross section. It is shown that the high energy proton-nucleus amplitude has a dominant peak for backward scattering centre of mass system. As a consequence of this peak if the protons are treated as distinguishable particles the cross section depends upon the impact energy E as E^{-3} in contrast to the commonly accepted E^{-6} dependence. When the protons are treated as indistinguishable particles the electron capture cross section is not defined at sufficiently high energies. This same cross section is also calculated using the distorted wave approximation as developed by Bassel and Gerjuoy in 1960. It is shown that the proton-nucleus amplitude is only cancelled in the forward direction and consequently the electron capture cross section is again not defined at high energies. Sustainable Development - The Roles Of Carbon And Bio-carbon: An Introduction To Molecular Sciences Pierre Vogel, 2022-06-21 Due to overconsumption of fossil carbon humanity faces four major problems: global warming, decrease of biodiversity, pollution of the biosphere and the degradation of agriculture soils. It is not enough to reduce our greenhouse gas emissions by stopping the consumption of fossil carbon; it is also urgent to remove carbon dioxide from the atmosphere. In order to understand the challenges outlined above, a minimal knowledge of the most important carbon compounds and their transformations is an asset. This textbook is therefore an introduction to the molecular sciences and shows how we depend on carbon compounds, what they are and how they are transformed. Plant biomass, including agricultural forestry and urban wastes, is the source of bio-carbon that can replace fossil carbon. In addition, we will always need carbon-containing substances for our comfort and health. These important topics are covered in this textbook. Life begins with water, carbon dioxide and the sun. Carbon dioxide is not a waste but a starting material for a better life. Biomass and carbon dioxide are our best allies in sustainable development, circular economy. This textbook explains why. This book contains 100 problems and solutions, more than 180 colour pages and bibliographical sketches of most important scientists and inventors. The Role of Catalysis for the Sustainable Production of Bio-fuels and Bio-chemicals Kostas

Triantafyllidis, Angelos Lappas, Michael Stöcker, 2013-03-19 The Role of Catalysis for the Sustainable Production of Bio-fuels and Bio-chemicals describes the importance of catalysis for the sustainable production of bio-fuels and biochemicals, focused primarily on the state of the art catalysts and catalytic processes expected to play a decisive role in the green production of fuels and chemicals from biomass. In addition, the book includes general elements regarding the entire chain of biomass production, conversion, environment, economy and life cycle assessment. Very few books are available on catalysis in production schemes using biomass or its primary conversion products such as bio-oil and lignin. This book fills that gap with detailed discussions of catalytic pyrolysis of lignocellulosic biomass, hybrid biogasoline by co-processing in FCC units, Fischer

Tropsch synthesis to biofuels biomass to liquid process Steam reforming of bio oils to hydrogen With energy prices rapidly rising environmental concerns growing and regulatory apparatus evolving this book is a resource with tutorial research and technological value for chemists chemical engineers policymakers and students Includes catalytic reaction mechanism schemes and gives a clear understanding of catalytic processes Includes flow diagrams of bench pilot and industrial scale catalytic processing units and demonstrates the various process technologies involved enabling easy selection of the best process Incorporates many tables enabling easy comparison of data based on a critical review of the available literature
